CONTENTS

APPENDICES

1 NTRODUCTION

1.1 TERMS OF REFERENCE

WSP was instructed by Berkley St James ('the Client') to undertake a Preliminary Risk Assessment (PRA) at the site known as Milton Keynes East (MKE) located in greater Milton Keynes, Buckinghamshire ('the site'). This report has been produced in support of the submission of a hybrid planning application.

The site location and current layout is presented in **Appendix A** (**Figure 1** and **Figure 2**).

1.2 PROPOSED DEVELOPMENT PLANS

The proposed development as per the application is understood to comprise a new mixed-use development area including residential dwellings, employment uses, schools, a community centre, public open spaces and further town features.

The final parameter plans are not available for inclusion within the timescales of this report but can be referenced within Appendix C2, Volume 2 of the Environmental Statement.

1.3 AIMS

The key aims of this assessment are to:

- Develop a preliminary Conceptual Site Model (CSM) to identify potential contamination risks associated with the proposed development of the Site;
- Evaluate likely contaminated land exposure pathways and their potential significance on identified receptors to support the proposed redevelopment; and
- Highlight environmental considerations (i.e. potential risk/constraints) with respect to ground, ground gas and groundwater conditions.

1.4 SCOPE OF WORKS

In order to meet the aims stated in Section 1.3 above, the following scope of works were undertaken:

- A review of plans made available by the client, publicly available regulatory information and available historical Ordnance Survey maps to assess the current and historical potentially contaminative uses of the Site, and of land uses in the vicinity of the site;
- A review of publicly available information pertaining to the geology, hydrogeology and hydrology of the site and surrounding area to assess ground conditions and the presence of plausible sensitive environmental receptors. This included a review of available borehole data, regulatory databases, mapping and historical reports;
- A review and comment on existing information and/or reports on the site, where available; and,
- Derivation of a preliminary CSM through the identification of plausible contaminant linkages in order to provide a qualitative ranked assessment of the likelihood of potential sources of land contamination posing a significant risk to the human health and the environment.

1.5 LEGISLATIVE CONTEXT AND GUIDANCE

This report has been prepared in general accordance with:

- Part 2A of the Environmental Protection Act 1990; and,
- The National Planning Policy Framework 2019.

The following good practice and statutory guidance were considered, and the assessment was undertaken in general accordance with:

- Environment Agency (EA) 'Land Contamination Risk Management', LCRM. 2020;
- NHBC, EA and CIEH 'Guidance for the Safe Development of Housing on Land Affected by Contamination' R&D66. 2008; and,
- CIRIA C552 'Contaminated Land Risk Assessment. A guide to good practice' (2001).

1.6 SOURCES OF INFORMATION

The following sources of information have been used in the production of the report:

- Groundsure Insights report, dated 23 July 2020, Order Ref: GSIP-2020-10326-1095;
- Environment Agency Catchment Data Explorer, https://environment.data.gov.uk/catchment-planning/, accessed 23 July 2020;
- Flood Map for Planning website, https://flood-warning-information.service.gov.uk/long-term-flood-risk/map?easting=488748&northing=242062, accessed on 23 July 2020;
- MAGIC website, https://magic.defra.gov.uk/, accessed on 21 July 2020;
- Department of the Environment Industry Profiles accessed on 21 July 2020;
- The British Geological Survey (BGS) Geological maps Sheet No. 203, Bedford, 1:50,000 Bedrock and Superficial Edition (2010) (online);

1.7 LIMITATIONS

This report is addressed to and may be relied upon by the Client and may not be relied upon or transferred to any other parties without the express written agreement of WSP.

This report should be read and used in full. No responsibility will be accepted where this report is used, either in its entirety or in part, by any other party. WSP cannot be held liable for third party information. Full details of the limitations are provided as **Appendix B**.

1.8 UNDERSTANDING RISK

It is important to recognise that any risks identified during a preliminary assessment such as that presented below are perceived risks based on the recorded information reviewed. A more detailed assessment of the actual risks can only be assessed following intrusive investigations. The preliminary assessments presented herein are qualitative based on professional judgements following review of the available data and within the context of the existing/proposed use. Those risk categories presented (Very Low, Low, Low to Moderate, Moderate, High, Very High) follow guidance presented in CIRIA Publication C552, Contaminated Land Risk Assessment – A Guide to Good Practice. CIRIA states that risk levels should be based both on an understanding of both the probability (likelihood) of a risk occurring and the magnitude of the potential consequence (severity) of a risk.

CIRIA defines four levels of probability and four levels of severity with relation to contaminated land, as presented in **Appendix C**.

2 SITE SETTING

2.1 SITE DESCRIPTION AND CURRENT USE

The site is located to the north east of Milton Keynes Central within the Moulsoe Civil Parish of Milton Keynes, in the county of Buckinghamshire. The site measures an approximate area of 440 ha. A summary of the site details is presented in **Table 2-1,** below. A Site Location Plan (**Figure 1**) and Proposed Land Use Plan (**Figure 2**) are presented in **Appendix A**.

An initial site walkover was undertaken by a member of WSP staff on the 11 February 2020 to assess the current site uses and areas of potential pertinence with regards to sources of contamination. Details from the walkover are also included in **Table 2-1**, below. Photos are included within the photographic record as **Figure 3** and **4**, presented in **Appendix D**.

Table 2-1 - Summary of Site Details

Detail	Comment
Name and Address of Site	Milton Keynes East, Milton Keynes
National Grid Reference	488963 241595
Site Description and Current Use	The site consists of a series of fields and agricultural land with occasional small scale developments/properties. The site is bound to the north by the A422 road, the east and west cut southbound through fields, and in the south the boundary mostly runs along the M1 motorway, though also includes the parcel of land and roads to the southwest of junction 14 of the M1. Properties that lie within the greater site boundary including a hotel and furniture store are excluded from the planning site boundary. The London Road A509 cuts through the centre of the site running in a north-south orientation and joins the M1 at junction 14. The River Ouzel flows through the centre of the site draining offsite to the north at Newport Pagnell. Several small watercourse/land drains discharge into the River Ouzel. The property off the A509 in the northern central part of the site appears to consist of a residential dwelling, farm buildings and areas of stockpiled waste materials and farm equipment. At the back of a property is a rectangular parcel of heavily vegetated land / marsh land with a further refuse pile. Further farm buildings are located to the south west of the above property adjacent to the A509. Evidence of fly tipping was noted in a number of locations across the site during the walkover and comprised building waste, minor household waste and farming equipment. Caravans and horses were also noted to be present on-site by the A509, just south of the Holiday Inn.
Site Setting and Surrounding Area	The town of Newport Pagnell is located approximately 2 km to the north / northwest of the site and Milton Keynes Central is located approximately 2 km to the southwest. Further agricultural land and fields extend to the east of the site within the civil parish of Moulsoe. The land immediately to the southwest and south of the site contains several industrial land uses including industrial estates and a sewage works.

Detail	Comment
Surface Cover & Topography	The central reservation of the site where the River Ouzel runs forms the lowest levels of the site at roughly 56 m AOD. From there the site levels gently increase on either side of the flood plain to a general grade of 60 m AOD. The eastern extent of the site gradually increases in grade to around 80 m AOD. The site is predominantly covered by farm land and grassland that is separated by mature hedgerows and semi-mature trees in places.

3 HISTORIC SETTING

3.1 ON-SITE AND OFF-SITE HISTORY

Historical maps were obtained as part of the Groundsure report (**Appendix E**) and were reviewed to identify potentially contaminative former land uses on site and within a 500 m radius of the site boundary.

It is understood that the site has seen little anthropogenic development and has remained predominantly as agricultural land and grassland. The limited on-site development has included a brickworks with associated clay pits and refuse heap, farms and occasional residential dwellings and allotments. The section of the M1 motorway passing through the south western extent of the site was constructed in 1950s. Several small-scale man-made surface water features are present across the site.

A summary of the pertinent on-site and off-site features relevant to contaminated land are presented in **Table 3-1** and **Table 3-2**, below. Further detail is available on the historical maps, as presented within **Appendix E**.

Table 3-1 - Summary of Pertinent History of the Site

Date of Historical Map / Imagery	Land Use on Site
1881	The A509 road is present running roughly north to south through the centre of the site. A brick works with associated brick kilns and clay pits is present in the northern central region of the site adjacent to the road. A refuse heap is also listed at the site. A farm labelled as 'Cottage Farm' is present in the south of the site. An unspecified tank is recorded in the west of the site in proximity to the River Ouzel.
1924	A plot of allotments is labelled on the map along the south eastern perimeter of the site (no longer labelled in 1976).
1925	The brick works are no longer labelled on the map and new structures have been established on the site. The associated clay pits to the east of the buildings appear to be infilled and the land is demarcated as marshland / vegetated. A new building has been constructed to the south of the former brick works on the western side of the A509. The Cottage Farm is relabelled as 'Waitworths Farm'.
1969	The former brick works site has been further developed with structures and a 'pump' is labelled on the map associated with the structures. A tank is labelled on the marshes behind the structures in 1972 mapping. Waitworths Farm has been further developed and relabelled as 'Hermitage Farm'. Tanks are recorded to be associated with the development.

Date of Historical Map / Imagery	Land Use on Site
1970 - Present	No significant changes noted, current site uses and layout established.

Table 3-2 - Summary of Pertinent History Off-site and in Surrounding Land

Date of Historical Map	Off-site Feature (within 500 m)
1881	Within the centre of the site at the location of the current Holiday Inn hotel complex (outside of planning application boundary) the farm estate 'Moulsoe Buildings' is present. Approximately 100 m south of the southern site boundary is an 'Old Gravel Pit' flanking the A509.
1886	South west: Occasional farms, small town of Willen from 200 m including church with burial yard. South: The town of Broughton from approximately 450 m including a burial yard and farms. East: The town of Moulsoe from 250 m including a church burial yard and gravel pits, and various small farm complexes. North east: fields and occasional farm complex. North west: The outskirts of Newport Pagnell (from approximately 400 m) including a Work House, farm fields, a gravel pit and farm complexes. West: Area of Caldecote with associated farm, Caldecote Mill and numerous wells.
1924	An unspecified tank is recorded on the mapping associated with the former Moulsoe Buildings (1924 – 1963). An area of allotments and an Anglo-Saxon Burial Ground are noted from approximately 80 to the north west of the site in Newport Pagnell.
1963	The M1 motorway is seen to be constructed running through the south western extent of the site in a south east to north west orientation.
1969	The gravel pit to the south of the site is now shown to be infilled and covered by vegetation. A pumping station is labelled on the map approximately 130 m to the west of the site at Caldecote.
1970	A Council Yard has been established located adjacent to the western site boundary and bound to the west by Willen Road.
1972	The Moulsoe Buildings farm has been developed into a hotel complex. A tank associated with an off-site farm, 'Cotton Valley Farm', is located adjacent to the southern border. A 'disused pit' is noted on the map approximately 420 m south of the site.

Date of Historical Map	Off-site Feature (within 500 m)
	To the north west, multiple 'works' have been developed from approximately 400 m. A pumping station is labelled on the map (possibly first constructed by 1938) located approximately 180 m from the western site boundary.
2000 (Google Earth Satellite Imagery)	By the 1970s, Milton Keynes had been largely developed to the west / south west of the site. Associated development within 500 m of the site boundary includes: the expansion and redevelopment of the town of Willen to the west, the development of the industrial complex of Tongwell also to the west, the construction of Willen Lake from approximately 80 m to the south west, the Cotton Valley sewage treatment works (first established 1974) immediately to the south of the site and Northfield Industrial complex immediately to the south of the A509 including various warehouses, light industrial units, a coach station and fuel filling stations.
2000	A quarry has been established approximately 100 m to the south east of the site.
2001	By 2001 the A509 has been extended beyond the northern and southern areas of the site: from junction 14 of the M1 to run east – west along the southern perimeter and partially through the site; and, in the north connecting to the A422 and passing to north east forming part of the northern site boarder. An industrial estate (Interchange Park) has been developed adjacent to the north of the northern A509.
2016	By 2010 the quarry to the south east is shown to be mostly backfilled / decommissioned and by 2016 the area is seen to be reinstated as a featureless field.

4 ENVIRONMENTAL SETTING

4.1 GEOLOGY

British Geological Survey (BGS) Geological map Sheet No. 203, Bedford, 1:50,000 Bedrock and Superficial Edition (2010) (online); BGS 'Geology of Britain' online viewer; and available nearby historic borehole records and geological publications were reviewed.

The superficial geology of the site and greater area is dictated largely by glacial erosional and depositional environments altering old river channels and flood plains. The site is drained by the River Ouzel, a major tributary of the River Great Ouse located downstream to the northwest at Newport Pagnell. The Ouzel flood plain extends across the site and is filled by Alluvium sediments that are entrenched into the First Terrace gravels. Sheets of periglacial Head Deposits blanket the First Terrace gravels on the sides of the Alluvium and up to the valley sides. At the eastern extent of the site and extending further eastwards are diamicton and glaciofluvial deposits formed in glacial conditions during the Quaternary Period. Superficial deposits are mapped as locally absent in most of the east of the site. There is a deep buried channel feature present roughly in the centre of the site running to the north-west, filled with glaciofluvial deposits (**Figure 4-2**).

Figure 4-1 - Superficial Geology. Source: BGS online mapping.

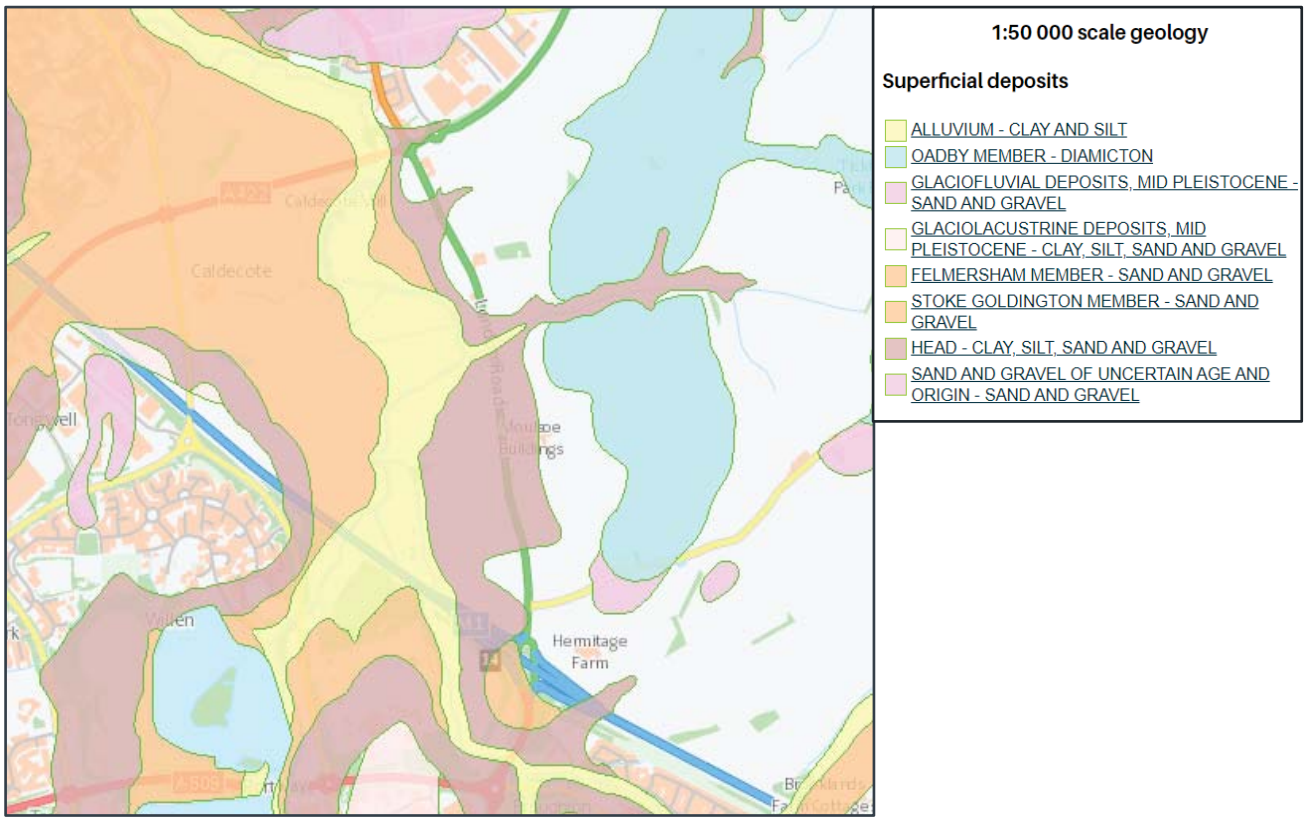

Figure 4-2 - Superficial and Bedrock Geology with buried channel feature demarked by blue arrows. Source: BGS online map Sheet No. 203 Bedford, 2010.

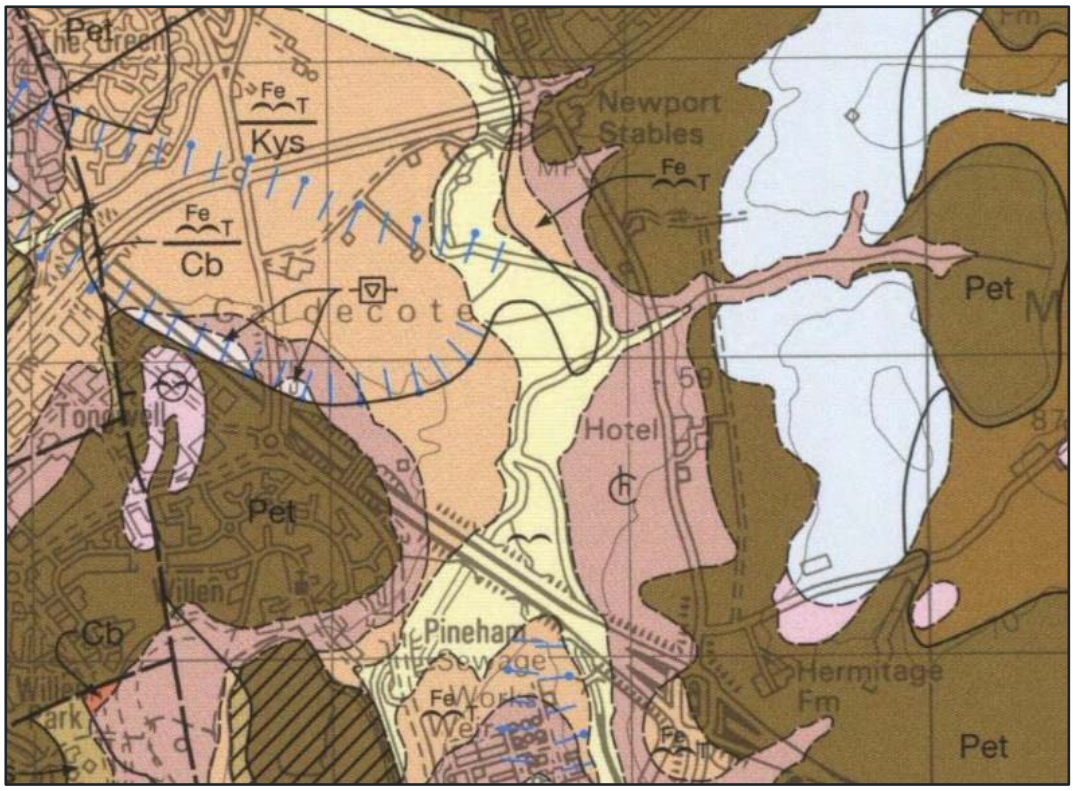

Bedrock deposits on site are that of the Oxford Clay Formation consisting of thick deposits of mudstones (21 - 24 m) with siltstone and sandstones at the base, underlain by silici-silty or silici-sandy mudstones of the Kellaways Sand Formation, underlain by the Great Oolite Group consisting of interbedded limestones and subordinate sandstones and mudstones. In turn the geology is underlain by the Lias Group made up of substantial thicknesses of mudstones.

Four major faults are present within the area with faulting also inferred to be present on site [1].

A summary of the anticipated geology, anticipated distribution and typical description is presented in **Table 4-1**.

[1] Horten. A, 1974.

Table 4-1 - Anticipated Ground Profile with Material Description

Stratum [1][2][5][6]	Distribution	Typical Thickness of Strata (m bgl) [1]	Typical Strata Description [1][2]	Aquifer Designation [2][3]
Made Ground	Limited to areas of previous development.	Unknown.	Unknown, anticipated to be highly variable.	Not Classified
Superficial Geology				
Head	Central region of the site.	Where present, up to 2.1 m [6]	Poorly sorted and poorly stratified Clay sand and gravel, locally with lenses of silt or peat and organic material	Secondary Undifferentiated Aquifer
Oadby Member - Diamicton	East only	Variable up to 20 m, typically 1 – 7m	Grey, weathering brown, characterised by Cretaceous and Jurassic rock fragments; subordinate lenses of sand and gravel, clay and silt.	Unproductive
Glaciofluvial Deposits	Centre and east of site.	Up to 15 m [5] (inferred)	Sand and gravel.	Secondary 'A' Aquifer
Alluvium	Central region of the site.	Where present, up to 2.5 m [6]	Normally soft to firm consolidated, compressible silty Clay, but can contain layers of silt, sand, peat and basal gravel.	Unproductive Strata
Felmersham Member - First Terrace: River Terrace Gravels	Central region of the site.	3 m	Gravel with sand.	Secondary 'A' Aquifer
Bedrock Geology				
Stewartby Member– Oxford Clay Formation	Far south-eastern extent only	22 – 27 m	Pale to medium grey, commonly smooth, variably silty, calcareous, blocky Mudstones.	Unproductive Strata
Peterborough Member - Oxford Clay Formation	Sitewide except for far eastern / north-eastern extent	21 – 24 m [5]	Brownish-grey, fissile, organic-rich (bituminous) Mudstones.	Unproductive Strata

Stratum [1][2][5][6]	Distribution	Typical Thickness of Strata (m bgl) [1]	Typical Strata Description [1][2]	Aquifer Designation [2][3]
Kellaways Sand Formation	Sitewide	5 – 8 m	Mudstone, grey, commonly silici-silty or silici-sandy, with (predominantly in the upper part) beds of calcareous Siltstone and Sandstone.	Secondary 'A' Aquifer
Great Oolite Group	Sitewide	65 to 71 m	Limestones, Mudstones and Siltstones	Predominantly Unproductive Strata

(6) Previous ground investigation reports.

4.2 HYDROLOGY

The site is located within the Great Ouse catchment area, falling both in the smaller Ouzel & Milton Keynes and Bedford operational catchments. The River Ouzel (also referred to as River Lovat) runs through the site in broadly a south to north direction, draining into the River Great Ouse approximately 1.3km (straight line distance) to the north. The River Ouzel itself has been heavily modified historically within the area and on-site there are networks of drains and historically manipulated watercourses flowing to the river from multiple areas of the site. In addition, there are several small ponds, disused wells and other small-scale surface water features dotted across the site. Off-site to the south west is Willen Lake (from approx. 70 m), one of two major balancing lakes within the River Ouzel flood management scheme.

The site is located within a Nitrate Protection Zone in relation to the River Great Ouse.

Evidence of the proposed Willen Sewage Works Outflow Tunnel running through the site north south is recorded within the Milton Keynes BGS Memoir document. (source: BGS publication on Milton Keynes).

4.3 HYDROGEOLOGY

The Glaciofluvial Deposits and the Felmersham Member Deposits are classified by the EA as Secondary A Aquifers. The Head deposits are classified as a Secondary Undifferentiated aquifer.

The Alluvium and Diamicton deposits are both classified by the EA as Unproductive strata.

The bedrock deposits of Oxford Clay are described as Unproductive strata. The Kellaways Sand Formation is classified as a Secondary A Aquifer. The underlying Great Oolite Group is generally classified as Unproductive strata at the site.

The Oxford Clay Formation is anticipated to largely act as an aquitard limiting the flow of water from superficial aquifers to the bedrock aquifers. The Oxford Clay Formation is not mapped to be present in the west of the site and it is therefore possible that the superficial aquifers in this area are in hydraulic continuity with the underlying aquifer within the Kellaways Sand Formation.

The Made Ground is not classified by the EA, however groundwater may be present as discontinuous pockets or as a perched water body within these deposits where present.

Ground investigations in 2007 and 2012 (summarised in **Section 5.6**) reported groundwater at shallow depths within the Head deposits, within the glacial Diamicton deposits and also within the Oxford Clay deposits during the in the centre and south east of the site.

It is anticipated that the shallow groundwater largely drains towards the River Ouzel in the centre of the site and ultimately the River Great Ouse, to the north as well as following the topographical gradient.

4.4 ABSTRACTION POINTS

There are four historical licensed groundwater abstraction sites within a 500 m radius of the site, one of which is within the site boundary, as detailed in **Table 4-2** below.

Table 4-2 - Licensed Groundwater Abstractions Summary

Abstraction Point	Licence Number	Approximate Distance and Direction	Use	Status
Well Moulsoe Buildings	6/33/10/*G/0002	On site, centre	General Farming & Domestic.	HISTORIC
Well at Caldecote Farm	6/33/10/*G/0007	276m, north	General Farming & Domestic	HISTORIC
Gravel pit at Newport Pagnell	6/33/10/*G/0010	279m, west	Mineral Washing	HISTORIC
Gravel pit at Broughton Barns	6/33/09/*G/0022	360m, south	Mineral Washing	6/33/09/*G/0022

There is one licenced surface water abstraction point listed within 500m of the site boundary. It is a historical abstraction license that is located on-site at the River Ouzel, as described in **Table 4-3** below.

Table 4-3 - Licensed Surface Water Abstractions Summary

Abstraction Point	Licence Number	Approximate Distance and Direction	Use	Status
River ouzel at Moulsoe	6/33/10/*S/0009	On site, centre/northwest	Spray Irrigation - Direct	HISTORIC Permit last active 2002.

4.5 FLOODING

The central reservation of the site where the River Ouzel runs is largely classified by the EA as 'Flood Zone 3' meaning it has a High probability of flooding. High risk means that each year this area has a chance of flooding from rivers and surface waters of greater than 3.3%.

The remainder of the site is classified as at a Very Low risk of flooding from rivers or the sea, meaning there is a <0.1% chance of flooding to occur each year.

Areas of the site in proximity to the surface water features including the land drains / tributaries of the River Ouzel and the river itself are classified as ranging from Low risk to High risk of flooding. Further, the central channel of the site along the River Ouzel floodplain is classified as being at risk from flooding from reservoirs.

4.6 RADON

Public Health England defines affected areas as those with a 1% chance or more of a house having a radon concentration at or above the action level of 200 Bq/m^3. The site is reported to lie in an area where less than 1% of properties are above the action level therefore no radon protective measures are considered necessary.

5 REGULATORY INFORMATION, CONSULTATION AND THIRD-PARTY REPORTS

5.1 REGULATORY DATABASE

The Groundsure report includes information and data collected from several organisations including the Environment Agency (EA), the Local Authority, the British Geological Survey (BGS), Department for Environment, Food & Rural Affairs (Defra), Health & Safety Executives (HSE), and the National Radiological Protection Board (NRPB).

It is considered that the information listed in **Table 5-1, Table 5-2 and Table 5-3** represents data of potential relevance in relation of contamination at the site and in close proximity to the site. Full detail can be found presented within the Groundsure report, provided in **Appendix E**.

Table 5-1 - Summary of Database Searches: Pollution incidents

Descriptor	On-site	0-249 m	250-500 m	Details
Licensed Pollution Release	0	2	4	The closest registered pollution release site is located approximately 207m southeast of the site at Esca Food Solutions Ltd for the processing of meat products. The remaining sites are located to the east and southwest of the site relating to permits for surface cleaning, incineration and combustion, manufacturing of non-alcoholic beverages and for coating processes.
Licensed Discharges to Controlled Waters	11	12	9	The on-site discharge consents are listed as for the discharge of final/treated sewage effluent, agricultural discharge and miscellaneous discharges to surface waters.
Pollutant Release to Public Sewer	0	1	1	As discharges of Special Category Effluents to the public sewer. The closest record is associated with the Cotton Valley Wastewater Treatment Works for Alpheus Environmental Limited.
List 1 Dangerous Substances	0	2	0	The closest record is approximately 95m east at Chemetall Plc for the release of Cadmium and Mercury to the River Ouse. Active permit.
Pollution Incidents (Category 3 'Minor' and above)	1	3	2	The onsite incident occurred in 2003 and involved the release of inorganic chemicals / products, specifically alkalis resulting in a Minor impact to Land (Category 3). The remaining offsite incidents were mostly recorded as Category 3 incidents impacting either land, water or air. The exception is one Significant incident (Category 1) that took place in 2017 involving the release of a microbial pollutant that was recorded to impact Water. The incident took place approximately 100 m southwest of the site.

Descriptor	On-site	0-249 m	250-500 m	Details
Pollution Inventory Substances	1	1	1	The pollution inventory (substances) includes reporting on annual emissions of certain regulated substances to air, controlled waters and land. The data consist of the most recent complete year available. The onsite inventory permits relate to operations at the Cotton Valley Wastewater Treatment Station. The off-site permits are registered to Alpheus Environmental and Coca-Cola Partners.
Part 2(A) Licensed Industrial Activities	0	2	1	The licensed industrial activities within 250 m of the site are associated with the Cotton Valley Waste Treatment Centre for various related processes. The remaining off-site license site is located from approximately 320 m southeast associated with the Coca-cola Enterprises.

Table 5-2 - Summary of Database Searches: Waste Facilities

Feature	On-site	0-249m	250-500m	Details
Historical Landfill Sites	0	5	1	The closest historically active landfill site is located from approximately 32 m southeast of the site. Where data is provided, the landfills are listed to have accepted inert and or industrial waste. The landfills are recorded to the southeast, west and south of the site boundary.
Historical Waste Sites	0	2	0	Closest record is of a Waste Transfer Station located from approximately 9m east of the site at Cotton Valley Sewage Works. The second record is of a Recycling Works for aggregates registered from approximately 227 m north of the site.
Licensed Waste Sites	2	8	11	As active or recently closed waste sites under Environment Agency/Natural Resources Wales regulation. The first of the two on-site licensed waste facilities is located in the southwest of the site and is the registered active Cotton Valley Waste Transfer Station receiving household, commercial and industrial waste. Six further offsite waste licenses are associated with the Cotton Valley works including that for sewage sludge treatment, non-biodegradable waste and for landfill gas use. The second onsite license is at Hermitage Farm for the use of waste in construction. This license was surrendered in 2014. The remaining offsite waste licenced sites are held for waste activities associated with mineral mining (generally associated

Feature	On-site	0-249m	250-500m	Details
				with Willen Road Quarry to the north), waste landfilling or waste transfer stations.
Waste Exemptions	5	9	11	As activities involving the storage, treatment, use or disposal of waste that are exempt from needing a permit. Multiple onsite records associated with the Moulsoe, Wychelm Cottage and Hermitage farms. Offsite records are located all surrounding the site and include for sorting, treating, using and disposing of waste.

Numerous recent industrial or potentially contaminative land uses were identified within 250 m of the site. A summary is presented in **Table 5-3**, below, and the full list is included within the appended Groundsure data report.

Table 5-3 - Summary of Database Searches: Recent Industrial Land Uses

Distance from Site	Potentially contaminative recent land uses
On-site or in the immediate vicinity	Water pumping station, silos, electricity substations.
>100m	Electricity substations, water pumping stations, sewage pumping, settling tanks, generic storage tanks, warehouses.
101 – 250m	Tanks, vehicle service centres including sales and hire services and repairs garages, distribution centre, electricity substations, retail businesses, construction services, business park, electricity substations, quarries and mechanical engineers.

5.2 SENSITIVE LAND USES

The Groundsure report indicates that there are no ecological or other sensitive land uses identified within 500 m of the site. There are no Sites of Special Scientific or Areas of Outstanding Natural Beauty Interest within 1 km of the site.

The Moulsoe Buildings Farmhouse located in the centre of the site off-site is a Grade II listed building.

5.3 LOCAL AUTHORITY ENQUIRY

The EA and the EHO for the Milton Keynes Council were contacted by WSP (via email on the 23 July 2020) regarding any environmentally pertinent information held relating to the site. A response was received on 20 August 2020.

The EA stated that they do not hold any records for soil or groundwater contamination or remedial works beneath the site or within a 250 m radius, no records of spills or leaks from above ground

storage tanks, and they do not have any water quality monitoring sites within a 1 km radius of specified site. The records of landfill and waste transfer stations is detailed within **Section 5.1**.

The response from Milton Keynes Council confirmed much of the information gathered by the Groundsure report, and has been included within **Section 5.1** and **5.2**. The further pertinent information obtained is summarised below, with further detail presented in **Appendix F**.

- Details for a number of tanks, most notably: a record for a petroleum licence held by Hermitage Farm (south of the site) for a 500-gallon petroleum tank, converted to a diesel tank license in 1995. Unknown as to whether the tank is still operational or whether it is above or below ground.
- Two further locations surrounding the site boarder were identified as infilled ground (south and north west of the site).
- There are a number of small sites surrounding the site that have had minor contamination requiring remediation mitigation to satisfy planning conditions following a change of use. These sites are described by the Council as not considered likely to have an impact on the site.

5.4 UNEXPLODED ORDNANCE (UXO)

A preliminary desk study assessment was produced by Zetica UXO Ltd (18th November 2020) to further understand the potential UXO hazard level for the site: the preliminary assessment concluded that the site was of Low UXO hazard risk and did not require further desk-based assessment at this stage.

Further detail of the assessment is included within **Appendix F**.

5.5 PLANNING HISTORY

A search was made of the Milton Keynes Council's planning portal on 23 February 2021.

One record of a planning application was found on-site from the last 5 years:

- Ref. 16/03424/EIASCR: Screening opinion in respect of a proposed relining of an existing sewage pipeline between Cotton Valley Water Recycling Centre and Newport Pagnell Pumping Station.
- Decision: EIA not required. Nov 2016.

Various other small-scale applications are registered surrounding the site and also relating to the properties encompassed within the MKE site boundary but not covered by this development proposal. These applications generally concern extensions and improvement works to existing properties.

5.6 PREVIOUS REPORTS

The Milton Keynes East (MKE) Phase 1 Geo-Environmental Interpretative report and Caldecote Farm Geo-Environmental Interpretative report, have been consulted to obtain baseline data to support this Preliminary Risk Assessment. Details relevant to the current site risk assessment are summarised in the below.

Geo-Environmental and Geotechnical Assessment Interpretative Report, Milton Keynes East Phase 1. WSP, 2012

The site in question is located at the south east of the masterplan site and comprises what is referred to as Phase 1 of the MKE site. The report includes the findings from a geo-environmental and geotechnical intrusive ground investigation and the following Phase 2 risk assessment.

- The geology of the area was confirmed to generally match that of the published BGS mapping with the upper most bedrock being that of the Oxford Clay Formation. Superficial geology was described as Glacial Till covering the majority of surface, Head deposits in the west of the site, and undifferentiated sands encountered across the vast majority of the exploratory locations. Made Ground was found at no greater than 0.20 m thickness. Groundwater was encountered at shallow depths at around 1 m bgl within the Head deposits and also at around 7 m bgl within the Oxford Clay Formation.
- The intrusive works comprised multiple methods of investigation including trial pits, window sampler boreholes, cable percussive boreholes and various geotechnical testing. Monitoring wells were installed for assessment of ground gas and groundwater and samples were collected for laboratory testing. Results for the soils assessment were included within the report however groundwater samples were not retrieved.
- Overall, the assessment found that the soils tested did not present evidence of contaminants of concern at significantly elevated concentrations. Selected soil samples were shown to contain aromatic and aliphatic hydrocarbons above guideline assessment criteria thresholds however these were marginal. Further, one marginally elevated concentration of semi-volatile 2,4-Dinitrophenol was encountered, however also considered to be of low significance to the risk.
- Preliminary ground gas monitoring indicated that the risk from ground gas on the proposed development is considered to be very low.

Geo-Environmental and Geotechnical Interpretative Report, Caldecote Farm, Newport Pagnell. WSP, 2007

The report is of a phase 2 site investigation at the site referred to as 'Caldecote Farm, Newport Pagnell', falling mostly within in the centre of the current site boundary between London Road and Willen Road and covering an approximate area of 260Ha.

- The intrusive investigation comprised a total of 27 trial pits excavated to prove ground conditions, undertaken in-situ testing and to retrieve soil samples.
- Soil samples were analysed for a number of geotechnical parameters in addition to a limited scope of chemical analysis including for heavy metals, polyaromatic hydrocarbons, pH and sulphide.
- The ground investigation found that the geology encountered mostly matched that of the published BGS mapping with the exception of the presence of Head deposits overlying the River Terrace Gravels and the absence of Glacial Lake Deposits.
- The soils contamination assessment was undertaken using Soil Guideline Values (SGVs) valid at the time of reporting and that have since been superseded. When compared with SGVs for a residential with home grown produce land-use, the report finds a limited number of exceedances within samples of the topsoil, Alluvium and Head deposits. The exceeding analytes included cadmium and arsenic, and in all cases, the results were deemed to be either reflective of background concentrations or a non-significant anomaly. When compared to guideline assessment criteria in line with current industry standard, no contaminants of concern exceed their thresholds within the dataset available.

6 PRELIMINARY CONCEPTUAL SITE MODEL

6.1 INTRODUCTION

The preliminary Conceptual Site Model (CSM) is based upon the environmental conditions of the site as described in the previous sections and was developed in the context of the proposed development.

The assessment followed a risk-based approach; with the potential environmental risk assessed qualitatively using the 'source-pathway-receptor' contaminant linkage concept introduced in the guidance documents (principally the EA's LCMR) on the practical implementation of the Environmental Protection Act 1990.

Environmental risk can be defined as the combination of the consequence of a harmful effect and the probability of its occurrence. The existence of a contaminant linkage is primarily dependant on site usage and environmental conditions.

The environmental risk assessment has been carried out by identifying and evaluating the significance of the following:

- Potential sources of contamination: these include actual or potentially contaminating materials and activities, located either on or in the vicinity of the site;
- Potential receptors of contamination: these include future land users; and,
- Potential pathways for contamination migration: these are the routes or mechanisms by which contaminants may migrate from the source to the receptor.

6.2 POTENTIAL SOURCES OF CONTAMINATION

Table 6-1 provides a summary of the potential sources of contamination that may be present at the site, as well as the likely nature of such sources.

Table 6-1 - Potential Sources of Contamination

Potential Source	Potential Contaminants of Concern	Likely / Anticipated Distribution
ON-SITE		
Recent and Historical Agricultural land including farm infrastructure / associated pollution incidents	Various contaminants including pesticides, herbicides, nitrates, asbestos, petroleum hydrocarbons and heavy metals.	Site wide, notably surrounding farm boundaries and infrastructure in the centre, south and north.
Made Ground associated fly tipping and construction of M1 motorway	A wide range of possible contaminants including: asbestos, heavy metals, inorganics inc. cyanide, solvents, petroleum hydrocarbons, polyaromatic hydrocarbons (PAH), BTEX (benzene, toluene, ethylbenzene and xylene) and ground gases (methane, hydrogen sulphide and carbon dioxide).	Various locations/southern extent of site for M1.

Potential Source	Potential Contaminants of Concern	Likely / Anticipated Distribution
Historical Brick Works with brick kilns, clay pits and refuse heap	A wide range of possible contaminants including: asbestos, heavy metals (namely lead from the brick works), inorganics inc. cyanide, solvents, petroleum hydrocarbons, polyaromatic hydrocarbons (PAH), BTEX (benzene, toluene, ethylbenzene and xylene) and ground gases (methane, hydrogen sulphide and carbon dioxide).	North, centre.
Historical and recent Tanks	A range of contaminants, namely: petroleum hydrocarbons, PAH, BTEX, volatile organic compounds (VOCs) and semi volatile organics (SVOCs), heavy metals and solvents.	Various locations.
Historical Allotments	A range of possible contaminants including asbestos, heavy metals, inorganics (e.g. cyanide), petroleum hydrocarbons, PAH and ground gases (methane and carbon dioxide).	South eastern extent.
Organic rich soils – Alluvium (peat)	Ground gases including methane and carbon dioxide.	Central region of the site.
OFF-SITE		
Historical land-uses off-site but within this greater site boundary, including: farm infrastructure, tanks and hotel complex.	Asbestos, heavy metals, petroleum hydrocarbons, PAHs, BTEX, solvents, pesticides and herbicides, nitrates, VOCs and SVOCs.	Central, northern and south western points within the greater land boundary.
Further historical land-uses to the west including: M1 construction works, pumping station, wells and council yard.	A wide range of contaminants including: asbestos, heavy metals, petroleum hydrocarbons, PAHs and BTEX.	West.
Historical Allotments	A range of possible contaminants including asbestos, heavy metals, inorganics (e.g. cyanide), petroleum hydrocarbons, PAH and ground gases (methane and carbon dioxide).	All surrounding, closest south east and east.
Historical burial grounds and church yards	Various possible contaminants, namely asbestos, pathogens, formaldehyde, PAHs, heavy metals and ground gases (methane, hydrogen sulphide and carbon dioxide).	All surrounding, closest from 200 m east
Historical gravel pits and unspecified infilled pits	A wide range of possible contaminants relating to surrounding land uses, including: asbestos, heavy metals, inorganics, petroleum hydrocarbons, PAHs, VOCs &	All surrounding, closest from 100 m south.

Potential Source	Potential Contaminants of Concern	Likely / Anticipated Distribution
	SVOCs, and ground gases (methane and carbon dioxide).	
Historical landfill sites / Infilled land	A wide range of potential contaminants relating to the surrounding previous land uses, including: asbestos, heavy metals, inorganics (e.g. cyanide), petroleum hydrocarbons, PAHs, BTEX, mineral oils, PCBs, solvents, microbial, VOC and SVOCs and ground gases (methane, carbon dioxide and hydrogen sulphide).	Various locations, primarily located to the north west, south and south east of the site.
Historical and recent farm land and associated infrastructure	Namely pesticides & herbicides, nitrates, asbestos, heavy metals, petroleum hydrocarbons and PAHs.	All surrounding.
Historical and recent Tanks	A range of contaminants, namely: petroleum hydrocarbons, PAH, BTEX, volatile organic compounds (VOCs) and semi volatile organics (SVOCs), heavy metals and solvents.	Various locations.
Recent industrial / commercial land uses including:		
Development associated with the expansion of Milton Keynes, including: Cotton Valley Sewage Works, various industrial complexes including Northfield Industrial park and Tongwell.	A wide range of potential contaminants including: asbestos, heavy metals, inorganics (e.g. cyanide), petroleum hydrocarbons, PAHs, BTEX, mineral oils, PCBs, solvents, pathogens, VOC and SVOCs and ground gases (methane, carbon dioxide and hydrogen sulphide).	Adjacent to the west / south of the site.
Car Dealers; Road Haulage Services; Garage.	Waste oils (PAHs), heavy metals, brake fluids and fuels.	Multiple locations to the south, west and north of the site.
Miscellaneous industrial/commercial facilities Inc. distribution centres, warehouses, and light goods manufacturers.	A wide range of possible contaminants, including: asbestos, heavy metals, inorganics (e.g. cyanide), petroleum hydrocarbons, PAHs and ground gases (methane and carbon dioxide).	Multiple locations to the south, west and north of the site.

6.3 POTENTIAL RECEPTORS

In the context of the future proposed development, the following potential receptors were identified:

HUMAN HEALTH

- Future site users (e.g. residents, public open space users, school users);
- Construction workers and future maintenance workers; and,
- Third party neighbours.

CONTROLLED WATERS

Surface waters

- River Ouzel and its tributaries (onsite);
- River Great Ouse (off-site)
- Artificial surface water channels and drainage (onsite).

Shallow Aquifers

- Groundwater within the Glaciofluvial Deposits (Secondary A Aquifer);
- Felmersham Member (Secondary A); and,
- Head Deposits (Secondary Undifferentiated).

Deeper Aquifer

Kellaways Sand Formation (Secondary A Aquifer).Other

- Flora
- Services (eg. Potable water pipes) /Building Structures (eg. Concrete)

6.4 PLAUSIBLE PRELIMINARY CONTAMINANT LINKAGES

Table 6-2 provides an evaluation of the potential contaminant linkages that were considered to be plausible on the basis of the information currently available for the site and the proposed end use.

Table 6-2 - Plausible Preliminary Contaminative Linkages

Potential Contaminant Sources	Receptor	Pathways	Comments
ON-SITE			
▪ Agricultural land and associated farm infrastructure ▪ Made Ground soils /fly tipping ▪ Historical brick works site with refuse heap and infilled clay pit ▪ Historical and recent tanks ▪ Historical allotments ▪ Alluvium	**Human Health** ▪ Future site users	▪ Dermal contact ▪ Indirect ingestion of contaminants ▪ Inhalation of dust/fibres ▪ Ground gas/vapour migration	Overall, there is limited evidence of widescale historical manipulation and development of the site and therefore a limited number of potential sources of on-site contamination. The exceptions are namely the historical brick works, tanks, allotments and the farm infrastructure and the potential contamination generated by these sources is likely to be local to the source. Where these former uses are located, there is the potential for contamination to be present within the soils and/or groundwater. The proposed development is understood to comprise a large mixed-use residential and commercial development with areas of open space and soft landscaping. Where hardstanding is present, the exposure pathway of contaminated material to future site users will be limited and / or removed. The risk to future site users is therefore considered to be **Low**. Where areas of soft landscaping are proposed and where overlapping with the potential sources, the risks to future site users is considered to be **Low-Moderate** and should be further investigated. Ground gas and vapours may be generated in the vicinity of the former structures on site, tanks and namely the infilled areas of land. Similarly, Alluvium deposits (mapped in the centre of the site) with associated organic soils such as peat have the ability to generate ground gas. Ground gas may impact underground structures and services where it can accumulate in confined spaces and pose a risk of asphyxiation or explosion. This is considered to pose a **Low-Moderate** risk to future site users in the locations of potential sources where built structures also are proposed (particularly basements), and a **Low** risk in the remainder of the site. Where risks associated with ground gases and vapours are considered to be **Low-Moderate,** they would need to be investigated and potential risks mitigated based on the findings.
	Human Health ▪ Construction workers and future		The risk to future ground / maintenance workers is considered to be **Low-Moderate** across the site due to the potential for direct contact (e.g. dermal exposure or inhalation) with asbestos and potentially contaminated soils.

Potential Contaminant Sources	Receptor	Pathways	Comments
	maintenance workers		
	Human Health ■ Adjacent site users		The site is surrounded by a variety of land uses including commercial/industrial, residential and agricultural / open land. Risks may be present where neighbouring land uses are high sensitivity such as the residential dwellings to the south west and north. However due to the distance from sources identified on-site, the risk to adjacent site users from on-site contamination is considered to be **Low**. Migration of ground gas and / or vapours off-site is considered to be **Low**.
	Controlled Waters – Aquifers • Glaciofluvial Deposits • Felmersham Member • Head Deposits • Kellaways Sand Formation	■ Vertical and lateral leaching from impacted soil ■ Vertical and lateral migration from groundwater	Contaminants present within shallow soils or groundwater, such as that potentially associated with farming activities, has the potential to leach into underlying aquifers via surface water or rain water infiltration leading to vertical and lateral migration. The cohesive or 'Unproductive strata' likely act as aquicludes / aquitards where they overlie the water bearing units, thus restricting vertical or lateral migration of groundwater into the aquifers. The proposed development is understood to include areas of soft landscaping and hardstanding / building cover. In areas of hardstanding, the pathway of infiltration to below ground water receptors is limited. In areas proposed to be uncapped, rainfall will be able to infiltrate though shallow soils, including any Made Ground deposits, and pose a risk to underlying groundwater receptors. Given the historical uses of the site, there is the potential for contaminants to be present within shallow soils and groundwater in the vicinity of the identified sources. A sewer line is also indicated to be present in the south of the site connecting to the sewage treatment works, the condition and location of which is uncertain. Given this, the risk to groundwater is considered to be **Low** for the majority of the site**,** and **Low-Moderate** for the historically developed points.

Potential Contaminant Sources	Receptor	Pathways	Comments
	Controlled Waters – Surface Waters • River Ouzel and tributaries • Drains and surface water channels • River Great Ouse (off-site)		Surface water features may be impacted by contaminants from recent and historical land uses (e.g. agricultural) that migrate via surface water runoff. Based on the previous land uses of the site, the risk posed to surface waters is considered to be **Low – Moderate**.
	• Flora • Services • Building structures	• Direct contact with contaminated soils and groundwater	Given the historical land uses on the site, namely the agricultural use, and the unknown quantity and composition of the Made Ground at formerly developed points, there is the potential for future plant life to be in direct contact with contaminated soils and groundwater. Aggressive ground conditions from made ground or contaminants may be present on site which could affect future building structures or permeate into drinking water pipes. However, the risk is considered to be **Low**.
OFF-SITE			
▪ Recent industrial / commercial land-uses, including: sewage works, industrial complex, fuelling stations, coach stations, council yard, quarries, tanks and electrical substations. ▪ Historical land uses, including: burial grounds, infilled pits and quarries, farm infrastructure, allotments, landfills and tanks.	**Human Health** ▪ Future site users; ▪ Construction workers and future maintenance workers	▪ Ingestion or inhalation of impacted soils windblown from adjacent properties; ▪ Inhalation of asbestos fibres blown from adjacent properties; and, ▪ Ground gas/vapour migration.	The developed areas surrounding the site are predominantly covered with hardstanding which prevents windblown dust / fibres migrating from adjacent properties. The remaining surrounding area exists as agricultural land and therefore likely maintained / covered by vegetation, are also considered unlikely to generate windblown dust Areas of open ground such as the mineral extraction quarry on the western perimeter of the site have the potential to generate wind-blown dust. Made Ground deposits are anticipated to be present to the north, west and south of the site and therefore it is possible that ground gas generation and migration could be occurring from these areas. Furthermore, off-site sources such as infilled land, historical landfill sites and the sewage works have the potential to generate ground gases and vapours. The risk posed to the site and its future users is considered to be **Low-Moderate** and should be investigated further.

Potential Contaminant Sources	Receptor	Pathways	Comments
	Controlled waters – Surface Waters • River Ouzel and tributaries • Drains and surface water channels **Controlled waters – Aquifers** • Glaciofluvial Deposits • Felmersham Member • Head Deposits • Kellaways Sand Formation	▪ Vertical and lateral migration within groundwater.	Groundwater in the region is considered to broadly drain northwards in line with the River Ouzel catchment. More locally, water may drain onto site towards the River Ouzel from the west. Therefore, potentially contaminated groundwater from sources to the south and west of the site have the potential to impact the site (including developments associated with the Milton Keynes expansion, Cotton Valley Sewage Works, Northfield Industrial complex, tanks, council yard etc). Therefore, the risk to groundwater underlying the site and the on-site River Ouzel is considered to be **Low-Moderate**.
	• Flora • Services • Building structures	▪ Vertical and lateral migration within groundwater.	Groundwater is considered likely to flow in a broadly northward direction with local eastward flow from the west of the site. Therefore, potentially contaminated groundwater from sources to the south and west of the site could impact the site. The risk to future plant life in landscaped areas is considered to be **Low-Moderate**.

7 CONCLUSIONS AND RECOMMENDATIONS

7.1 CONCLUSIONS

Based on the information detailed within this report, the following conclusions have been made in the context of the proposed development.

SITE SETTING AND HISTORY

The site is located to the north east of Milton Keynes and measures an approximate area of 440 ha. The majority of the current land-use is open land / agricultural with occasional small-scale developments (mostly fall outside of application boundary). The London Road A509 cuts through the centre of the site running in a north-south orientation and joins the M1 at junction 14. The River Ouzel flows through the centre of the site draining off-site to the north at Newport Pagnell.

Historically, the site has seen limited development with the land predominantly existing as open fields and agricultural space. The exceptions include a brick works with associated refuse heap and clay pits in the centre north of the site, occasional tanks, allotments in the south and small-scale farm complexes. The surrounding land to the north, west and south have included various industrial and commercial uses both historically and in recent time, including the development associated with the expansion of Milton Keynes, Cotton Valley Sewage Works, Tongwell industrial area and Northfield industrial complex. The majority of the land use to the east of the site remains predominantly agricultural.

ENVIRONMENTAL SETTING

The superficial geology of the site and greater area is dictated largely by glacial erosional and depositional environments altering old river channels and flood plains of the Great Ouse River. Superficial deposits mapped on-site include Head deposits, Glaciofluvial Deposits, Diamicton, Alluvium, and River Terrace Gravels (Felmersham Member).

Bedrock deposits on-site are that of the Oxford Clay Formation (thick deposits of mudstones with siltstone and sandstones at the base), underlain by silici-silty or silici-sandy mudstones of the Kellaways Sand Formation, underlain by the Great Oolite Group consisting of interbedded limestones and subordinate sandstones and mudstones. There is a deep buried glacial channel mapped in the centre and north-west of the site reportedly filled with glaciofluvial deposits. Four major faults are present within the area with faulting also inferred to be present on site.

The River Ouzel flows through the centre of the site draining off-site to the north to the River Great Ouse. Its tributaries extend across the site on either side of the river, and in addition multiple small historically manipulated watercourses and land drains are present across the site.

There are a number of shallow aquifer bodies mapped by the EA to be present on-site: Secondary A Aquifers of the Glaciofluvial Deposits and the Felmersham Member Deposits, and the Secondary Undifferentiated Aquifer of the Head deposits. The Alluvium and Diamicton deposits are both classified by the EA as Unproductive strata.

The bedrock deposits of Oxford Clay are described as Unproductive strata. The Kellaways Sand Formation is classified as a Secondary A Aquifer. The underlying Great Oolite Group is generally classified as Unproductive strata at the site. The Oxford Clay Formation is anticipated to largely act as an aquitard limiting the flow of water from superficial aquifers to the bedrock aquifers.

The Groundsure report indicates that there are no ecological or other sensitive land uses identified within 500 m of the site.

PRELIMINARY CONCEPTUAL SITE MODEL

The environmental risk assessment has been carried out by identifying and evaluating the significance of the sources, pathways and receptors on-site and in the surrounding off-site area in the context of a mixed use residential/commercial development.

Risks to future site users from on-site contamination is considered to be Low for the majority of the site, and Low-Moderate in areas of former development. The risk from on-site sources of ground gas and vapours is similarly considered to be Low for the majority of the site, and Low-Moderate where sources are present and built structures are proposed overlying or in the immediate vicinity. The risk posed to the site and its future users from off-site sources of ground gas and vapours is considered to be Low-Moderate, largely from possible sources to the south and west of the site.

The risk to future ground / maintenance workers is considered to be Low-Moderate across the site due to the potential for direct contact with potentially contaminated soils/groundwaters. The risk to adjacent site users from on-site contamination is considered to be Low.

The risk to groundwater within the underlying shallow and deep aquifers from on-site sources is considered to be Low for the majority of the site, and Low-Moderate for the limited areas of historical development. Based on the previous land uses of the site, namely the considerable agricultural use and the likely history of surface run-off, the risk posed to the River Ouzel, its tributaries and the multiple manipulated surface water features is considered to be Low-Moderate. The risk posed by off-site sources of contamination to the underlying aquifers and the River Ouzel is considered to be Low-Moderate, namely due to off-site sources being to the south and west.

The risk to on-site flora, future services and building structures from on-site and off-site sources of soil and groundwater contamination is considered to be Low-Moderate.

7.2 RECOMMENDATIONS

The following is recommended based on this Preliminary Risk Assessment:

- An intrusive ground investigation should be undertaken at the site. It should be compliant with current UK guidance e.g. BS10175 and include a Generic Quantitative Risk Assessment (GQRA) to allow the assessment of identified plausible contaminant linkages and if remedial measures may be required. Due to the large scale of the development it is likely the development will be phased and therefore a phased approach to a future site investigation is likely.
- It is advised the ground investigations are designed based on the following technical objectives:
  - Characterisation of ground and groundwater conditions underlying the site;
  - Soil and groundwater sampling for contamination with investigation of identified potential sources;
  - Groundwater level, ground gas and vapour monitoring where relevant;
  - Ground gas and vapour assessment; and,
  - Provision of a GQRA to assess risk to human health and controlled waters.

Appendix B

WSP REPORT LIMITATIONS

REPORT LIMITATIONS - GROUND RISK AND REMEDIATION

GENERAL

1. WSP UK Limited has prepared this report solely for the use of the Client and those parties with whom a warranty agreement has been executed, or with whom an assignment has been agreed and outlined in the body of the report.

2. Unless explicitly agreed otherwise, in writing, this report has been prepared under WSP UK Limited standard Terms and Conditions as included within our proposal to the Client.

3. Project specific appointment documents may be agreed at our discretion and a charge may be levied for both the time to review and finalise appointments documents and also for associated changes to the appointment terms. WSP UK Limited reserves the right to amend the fee should any changes to the appointment terms create an increase risk to WSP UK Limited.

4. The report needs to be considered in the light of the WSP UK Limited proposal and associated limitations of scope. The report needs to be read in full and isolated sections cannot be used without full reference to other elements of the report and any previous works referenced within the report.

PHASE 1 GEO ENVIRONMENTAL AND PRELIMINARY RISK ASSESSMENTS

Coverage: *This section covers reports with the following titles or combination of titles: phase 1; desk top study; geo environmental assessment; development appraisal; preliminary environmental risk assessment; constraints report; due diligence report; geotechnical development review; environmental statement; environmental chapter; project scope summary report (PSSR), program environmental impact report (PEIR), geotechnical development risk register; and, baseline environmental assessment.*

5. The works undertaken to prepare this report comprised a study of available and easily documented information from a variety of sources (including the Client), together with (where appropriate) a brief walk over inspection of the Site and correspondence with relevant authorities and other interested parties. Due to the short timescales associated with these projects responses may not have been received from all parties. WSP UK Limited cannot be held responsible for any disclosures that are provided post production of our report and will not automatically update our report.

6. The opinions given in this report have been dictated by the finite data on which they are based and are relevant only for the purpose for which the report was commissioned. The information reviewed should not be considered exhaustive and has been accepted in good faith as providing true and representative data pertaining to site conditions. Should additional information become available which may affect the opinions expressed in this report, WSP UK Limited reserves the right to review such information and, if warranted, to modify the opinions accordingly.

7. It should be noted that any risks identified in this report are perceived risks based on the information reviewed. Actual risks can only be assessed following intrusive investigations of the site.

8. WSP UK Limited does not warrant work / data undertaken / provided by others.

REPORT LIMITATIONS - GROUND RISK AND REMEDIATION

INTRUSIVE INVESTIGATION REPORTS

Coverage: *The following report titles (or combination) may cover this category of work: geo environmental site investigation; geotechnical assessment; GIR (Ground Investigation reports); preliminary environmental and geotechnical risk assessment; and, geotechnical risk register.*

9. The investigation has been undertaken to provide information concerning either:

- **i.** The type and degree of contamination present at the site in order to allow a generic quantitative risk assessment to be undertaken; or
- **ii.** Information on the soil properties present at the site to allow for geotechnical development constraints to be considered.

10. The scope of the investigation was selected on the basis of the specific development and land use scenario proposed by the Client and may be inappropriate to another form of development or scheme. If the development layout was not known at the time of the investigation the report findings may need revisiting once the development layout is confirmed.

11. For contamination purposes, the objectives of the investigation are limited to establishing the risks associated with potential contamination sources with the potential to cause harm to human health, building materials, the environment (including adjacent land), or controlled waters.

12. For geotechnical investigations the purpose is to broadly consider potential development constraints associated with the physical property of the soils underlying the site within the context of the proposed future or continued use of the site, as stated within the report.

13. The amount of exploratory work, soil property testing and chemical testing undertaken has necessarily been restricted by various factors which may include accessibility, the presence of services; existing buildings; current site usage or short timescales. The exploratory holes completed assess only a small percentage of the area in relation to the overall size of the Site, and as such can only provide a general indication of conditions.

14. The number of sampling points and the methods of sampling and testing do not preclude the possible existence of contamination where concentrations may be significantly higher than those actually encountered or ground conditions that vary from those identified. In addition, there may be exceptional ground conditions elsewhere on the site which have not been disclosed by this investigation and which have therefore not been taken into account in this report.

15. The inspection, testing and monitoring records relate specifically to the investigation points and the timeframe that the works were undertaken. They will also be limited by the techniques employed. As part of this assessment, WSP UK Limited has used reasonable skill and care to extrapolate conditions between these points based upon assumptions to develop our interpretation and conclusions. The assumption made in forming our conclusions is that the ground and groundwater conditions (both chemically and physically) are the same as have been encountered during the works undertaken at the specific points of investigation. Conditions can change between investigation points and these interpretations should be considered indicative.

16. The risk assessment and opinions provided are based on currently available guidance relating to acceptable contamination concentrations; no liability can be accepted for the retrospective

effects of any future changes or amendments to these values. Specific assumptions associated with the WSP UK Limited risk assessment process have been outlined within the body or associated appendix of the report.

17. Additional investigations may be required in order to satisfy relevant planning conditions or to resolve any engineering and environmental issues.

18. Where soil contamination concentrations recorded as part of this investigation are used for commentary on potential waste classification of soils for disposal purposes, these should be classed as indicative only. Due consideration should be given to the variability of contaminant concentrations taken from targeted samples versus bulk excavated soils and the potential variability of contaminant concentrations between sampling locations. Where major waste disposal operations are considered, targeted waste classification investigations should be designed.

19. The results of the asbestos testing are factually reported and interpretation given as to how this relates to the previous use of the site, the types of ground encountered and site conceptualisation. This does not however constitute a formal asbestos assessment. These results should be treated cautiously and should not be relied upon to provide detailed and representative information on the delineation, type and extent of bulk ACMs and / or trace loose asbestos fibres within the soil matrix at the site.

20. If costs have been included in relation to additional site works, and / or site remediation works these must be considered as indicative only and must be confirmed by a qualified quantity surveyor.

EUROCODE 7: GEOTECHNICAL DESIGN

21. On 1st April 2010, BS EN 1997-1:2004 (Eurocode 7: Geotechnical Design – Part 1) became the mandatory baseline standard for geotechnical ground investigations.

22. In terms of geotechnical design for foundations, slopes, retaining walls and earthworks, EC7 sets guidance on design procedures including specific guidance on the numbers and spacings of boreholes for geotechnical design, there are limits to methods of ground investigation and the quality of data obtained and there are also prescriptive methods of assessing soil strengths and methods of design. Unless otherwise explicitly stated, the work has not been undertaken in accordance with EC7. A standard geotechnical interpretative report will not meet the requirements of the Geotechnical Design Report (GDR) under Eurocode 7. The GDR can only be prepared following confirmation of all structural loads and serviceability requirements. The report is likely to represent a Ground Investigation Report (GIR) under the Eurocode 7 guidance.

DETAILED QUANTITATIVE RISK ASSESSMENTS AND REMEDIAL STRATEGY REPORTS

23. These reports build upon previous report versions and associated notes. The scope of the investigation, further testing and monitoring and associated risk assessments were selected on the basis of the specific development and land use scenario proposed by the Client and may not be appropriate to another form of development or scheme layout. The risk assessment and opinions provided are based on currently available approaches in the generation of Site Specific Assessment Criteria relating to contamination concentrations and are not considered to represent a risk in a specific land use scenario to a specific receptor. No liability can be accepted for the retrospective effects of any future changes or amendments to these values, associated models or associated guidance.

REPORT LIMITATIONS - GROUND RISK AND REMEDIATION

24. The outputs of the Detailed Quantitative Risk Assessments are based upon WSP UK Limited manipulation of standard risk assessment models. These are our interpretation of the risk assessment criteria.

25. Prior to adoption on site they will need discussing and agreeing with the Regulatory Authorities prior to adoption on site. The regulatory discussion and engagement process may result in an alternative interpretation being determined and agreed. The process and timescales associated with the Regulatory Authority engagement are not within the control of WSP UK Limited. All costs and programmes presented as a result of this process should be validated by a quantity surveyor and should be presumed to be indicative.

GEOTECHNICAL DESIGN REPORT (GDR)

26. The GDR can only be prepared following confirmation of all structural loads and serviceability requirements. All the relevant information needs to be provided to allow for a GDR to be produced.

MONITORING (INCLUDING REMEDIATION MONITORING REPORTS)

27. These reports are factual in nature and comprise monitoring, normally groundwater and ground gas and data provided by contractors as part of an earthworks or remedial works.

28. The data is presented and will be compared with assessment criteria.

Appendix C

CIRIA RISK DEFINITIONS

CIRIA RISK DEFINITIONS

Table A1 - Classifications of Probability

Classification	Definition
High Likelihood	There is a pollution linkage / identified geotechnical hazard and an event that either appears very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution.
Likely	There is a pollution linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term.
Low Likelihood	There is a pollution linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a longer period such event would take place, and is less likely in the shorter term.
Unlikely	There is a pollution linkage but circumstances are such that it is improbable that an event would occur even in the very long term

Table A2 - Classifications of Consequence

Classification	Definition
Severe	Short-term (acute) risk to human health likely to result in "significant harm" as defined by the Environment Protection Act 1990, Part IIA. Short-term risk of pollution of sensitive water resource. Catastrophic damage to buildings/property. A short-term risk to a particular ecosystem, or organism forming part of such ecosystem.
Medium	Chronic damage to Human Health ("significant harm" as defined in DETR, 2000). Pollution of sensitive water resources. A significant change in a particular ecosystem, or organism forming part of such ecosystem.
Mild	Pollution of non-sensitive water resources. Significant damage to crops, buildings, structures and services (significant harm as defined m the Draft Circular on Contaminated Land, DETR, 2000). Damage to sensitive buildings/structures/services or the environment.
Minor	Harm, although not necessarily significant harm, which may result in a financial loss, or expenditure to resolve, Non-permanent health effects to human health (easily prevented by means such as personal protective clothing etc.). Easily repairable effects of damage to buildings, structures and services

The risk categories presented in this report, taking into account both probability and severity, are based on the matrix presented in **Table A3** below, following CIRIA C552.

Table A3 - Adopted Risk Categories / Comparison of Consequence Against Probability

Probability	Consequence			
	Severe	**Medium**	**Mild**	**Minor**
High Likelihood	Very High Risk	High Risk	Moderate Risk	Low to Moderate Risk
Likely	High Risk	Moderate Risk	Low to Moderate Risk	Low Risk
Low Likelihood	Moderate Risk	Low to Moderate Risk	Low Risk	Very Low Risk
Unlikely	Low to Moderate Risk	Low Risk	Very Low Risk	Very Low Risk

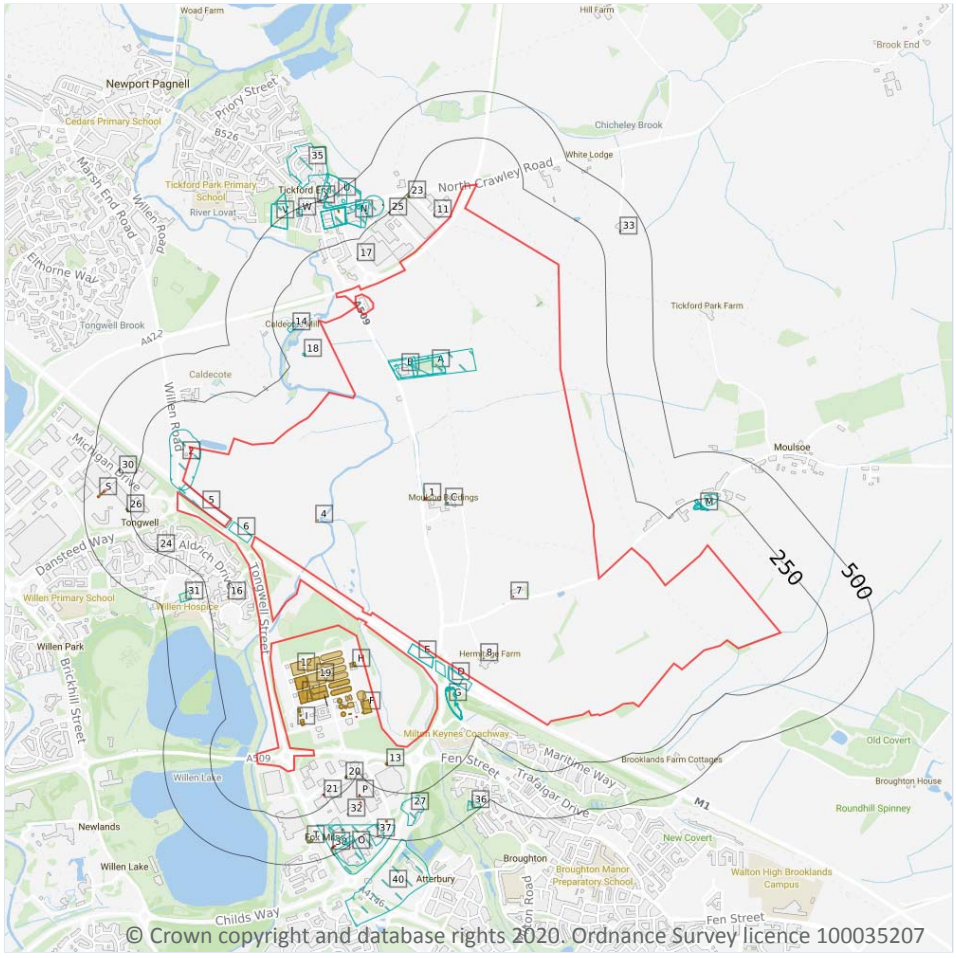
1 Past land use



1.1 Historical industrial land uses

Records within 500m	58

Potentially contaminative land use features digitised from historical Ordnance Survey mapping at 1:10,000 and 1:10,560 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on **page 13**

ID	Location	Land use	Dates present	Group ID
2	**On site**	**Council Yard**	**1971**	**1757229**

1.2 Historical tanks

Records within 500m	**76**

Tank features digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use map on **page 13**

This data is sourced from Ordnance Survey / Groundsure.

1.4 Historical petrol stations

Records within 500m	0

Petrol stations digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

This data is sourced from Ordnance Survey / Groundsure.

1.5 Historical garages

Records within 500m	0

Garages digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale, intelligently grouped into contiguous features. To prevent misrepresentation of the size of historical features at any given time, features are only grouped if they have similar geometries within immediately preceding or succeeding map editions. See section 2 for a breakdown of grouping if required. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

This data is sourced from Ordnance Survey / Groundsure.

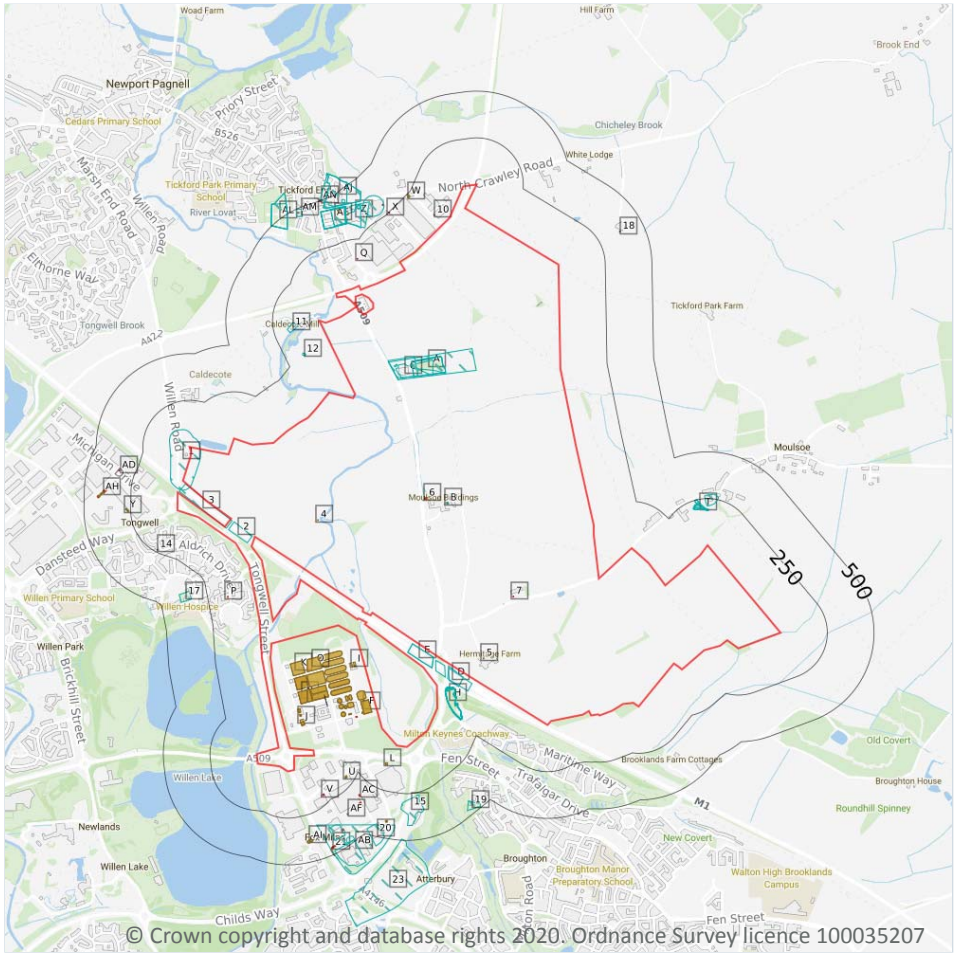
1.6 Historical military land

Records within 500m	0

Areas of military land digitised from multiple sources including the National Archives, local records, MOD records and verified other sources, intelligently grouped into contiguous features.

This data is sourced from Ordnance Survey / Groundsure / other sources.

2 Past land use - un-grouped



2.1 Historical industrial land uses

Records within 500m	62

Potentially contaminative land use features digitised from historical Ordnance Survey mapping at 1:10,000 and 10,560 scale. Any records shown are available intelligently grouped in section 1. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

Features are displayed on the Past land use - un-grouped map on **page 22**

2.4 Historical petrol stations

Records within 500m	**0**

Petrol stations digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale. Any records shown are available intelligently grouped in section 1. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

This data is sourced from Ordnance Survey / Groundsure.

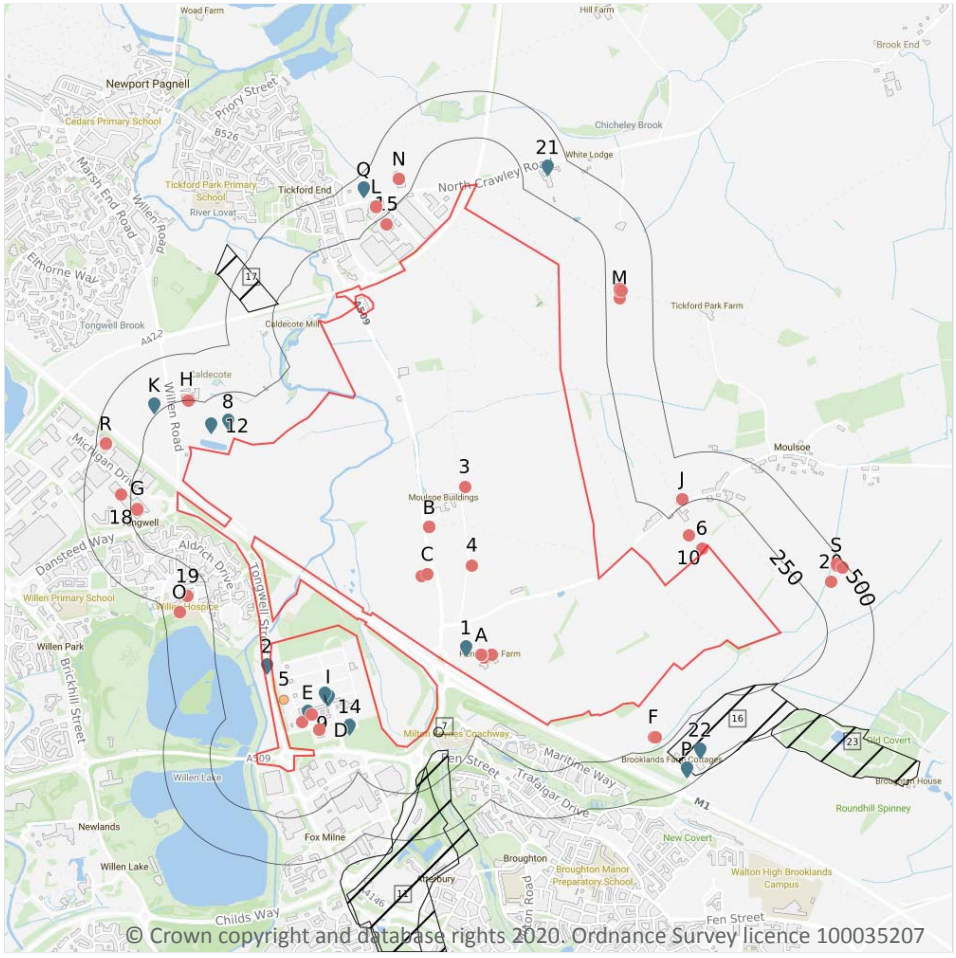
2.5 Historical garages

Records within 500m	0

Garages digitised from historical Ordnance Survey mapping at high-detail 1:1,250 and 1:2,500 scale. Any records shown are available intelligently grouped in section 1. Grouped and the original un-grouped features can be cross-referenced across sections 1 and 2 using the 'Group ID'.

This data is sourced from Ordnance Survey / Groundsure.

3 Waste and landfill



3.1 Active or recent landfill

Records within 500m	0

Active or recently closed landfill sites under Environment Agency/Natural Resources Wales regulation.

This data is sourced from the Environment Agency and Natural Resources Wales.

3.2 Historical landfill (BGS records)

Records within 500m	0

Landfill sites identified on a survey carried out on behalf of the DoE in 1973. These sites may have been closed or operational at this time.

This data is sourced from the British Geological Survey.

3.3 Historical landfill (LA/mapping records)

Records within 500m	0

Landfill sites identified from Local Authority records and high detail historical mapping.

This data is sourced from the Ordnance Survey/Groundsure and Local Authority records.

3.4 Historical landfill (EA/NRW records)

Records within 500m	6

Known historical (closed) landfill sites (e.g. sites where there is no PPC permit or waste management licence currently in force). This includes sites that existed before the waste licensing regime and sites that have been licensed in the past but where a licence has been revoked, ceased to exist or surrendered and a certificate of completion has been issued.

Features are displayed on the Waste and landfill map on **page 34**

3.7 Waste exemptions

Records within 500m	**110**

Activities involving the storage, treatment, use or disposal of waste that are exempt from needing a permit. Exemptions have specific limits and conditions that must be adhered to.

Features are displayed on the Waste and landfill map on **page 34**

N	245m NW	Electricity Sub Station	Buckinghamshire, MK16	Electrical Features	Infrastructure and Facilities

This data is sourced from Ordnance Survey.

4.2 Current or recent petrol stations

Records within 500m	0

Open, closed, under development and obsolete petrol stations.

This data is sourced from Experian.

4.3 Electricity cables

Records within 500m	0

High voltage underground electricity transmission cables.

This data is sourced from National Grid.

4.4 Gas pipelines

Records within 500m	0

High pressure underground gas transmission pipelines.

This data is sourced from National Grid.

4.5 Sites determined as Contaminated Land

Records within 500m	0

Contaminated Land Register of sites designated under Part 2a of the Environmental Protection Act 1990.

This data is sourced from Local Authority records.

4.6 Control of Major Accident Hazards (COMAH)

Records within 500m	0

Control of Major Accident Hazards (COMAH) sites. This data includes upper and lower tier sites, and includes a historical archive of COMAH sites and Notification of Installations Handling Hazardous Substances (NIHHS) records.

This data is sourced from the Health and Safety Executive.

4.7 Regulated explosive sites

Records within 500m	0

Sites registered and licensed by the Health and Safety Executive under the Manufacture and Storage of Explosives Regulations 2005 (MSER). The last update to this data was in April 2011.

This data is sourced from the Health and Safety Executive.

4.8 Hazardous substance storage/usage

Records within 500m	0

Consents granted for a site to hold certain quantities of hazardous substances at or above defined limits in accordance with the Planning (Hazardous Substances) Regulations 2015.

This data is sourced from Local Authority records.

4.9 Historical licensed industrial activities (IPC)

Records within 500m	0

Integrated Pollution Control (IPC) records of substance releases to air, land and water. This data represents a historical archive as the IPC regime has been superseded.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.10 Licensed industrial activities (Part A(1))

Records within 500m	27

Records of Part A(1) installations regulated under the Environmental Permitting (England and Wales) Regulations 2016 for the release of substances to the environment.

Features are displayed on the Current industrial land use map on **page 54**

This data is sourced from Local Authority records.

4.12 Radioactive Substance Authorisations

Records within 500m	**0**

Records of the storage, use, accumulation and disposal of radioactive substances regulated under the Radioactive Substances Act 1993.

This data is sourced from the Environment Agency and Natural Resources Wales.

4.13 Licensed Discharges to controlled waters

Records within 500m	**46**

Discharges of treated or untreated effluent to controlled waters under the Water Resources Act 1991.

Features are displayed on the Current industrial land use map on **page 54**

This data is sourced from the Environment Agency and Natural Resources Wales.

4.19 Pollution inventory substances

Records within 500m	29

The pollution inventory (substances) includes reporting on annual emissions of certain regulated substances to air, controlled waters and land. A reporting threshold for each substance is also included. Where emissions fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

4.20 Pollution inventory waste transfers

Records within 500m	**3**

The pollution inventory (waste transfers) includes reporting on annual transfers and recovery/disposal of controlled wastes from a site. A reporting threshold for each waste type is also included. Where releases fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

ID: T, Location: 320m SE, Permit: BN5327IH
Operator: Coca-Cola European Partners Great Britain Limited
Activity: TREATMENT AND PROCESSING (OTHER THAN PACKAGING) OF ONLY VEGETABLE RAW MATERIALS WITH A FINISHED PRODUCT CAPACITY > 300 T/D (OR 600 T/D FOR OPERATIONS LESS THAN 90 CONSECUTIVE DAYS IN ANY YEAR_
Address: Coca-Cola Northfield Drive Heighington Lane Business Park Milton Keynes MK15 0DD
Sector Food & Drink, Sub-sector: Food & Drink
Releases:

Route	Route description	Quantity (tonnes)	Release level	EWC code	EWC description	Hazardous waste

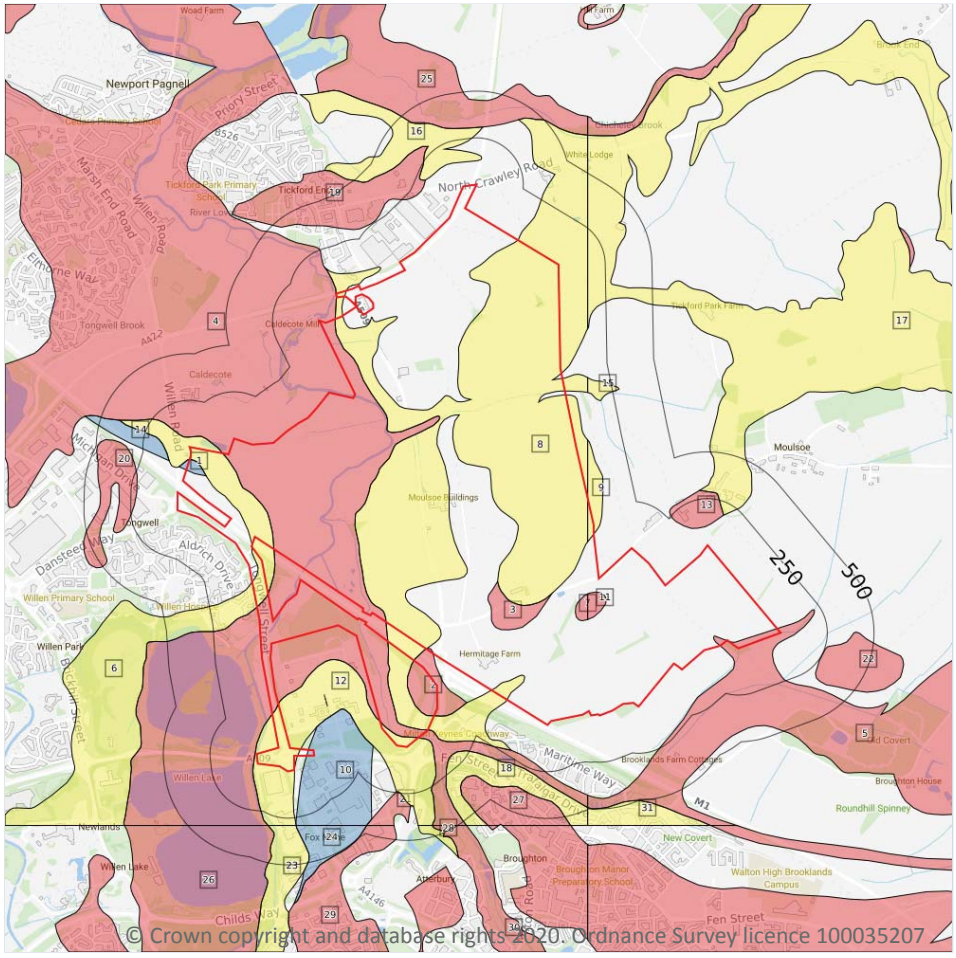
4.21 Pollution inventory radioactive waste

Records within 500m	0

The pollution inventory (radioactive wastes) includes reporting on annual releases of radioactive substances from a site, including the means of release. Where releases fall below the reporting threshold, no value will be given. The data is given for the most recent complete year available.

This data is sourced from the Environment Agency and the Scottish Environment Protection Agency.

5 Hydrogeology - Superficial aquifer



5.1 Superficial aquifer

Records within 500m	31

Aquifer status of groundwater held within superficial geology.

Features are displayed on the Hydrogeology map on **page 99**

ID	Location	Designation	Description
1	On site	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow
2	On site	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers

ID	Location	Designation	Description
3	**On site**	**Secondary A**	**Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers**
4	**On site**	**Secondary A**	**Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers**
5	**On site**	**Secondary A**	**Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers**
6	**On site**	**Secondary Undifferentiated**	**Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type**
7	**On site**	**Secondary A**	**Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers**
8	**On site**	**Secondary Undifferentiated**	**Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type**
9	**On site**	**Secondary Undifferentiated**	**Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type**
10	**On site**	**Unproductive**	**These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow**

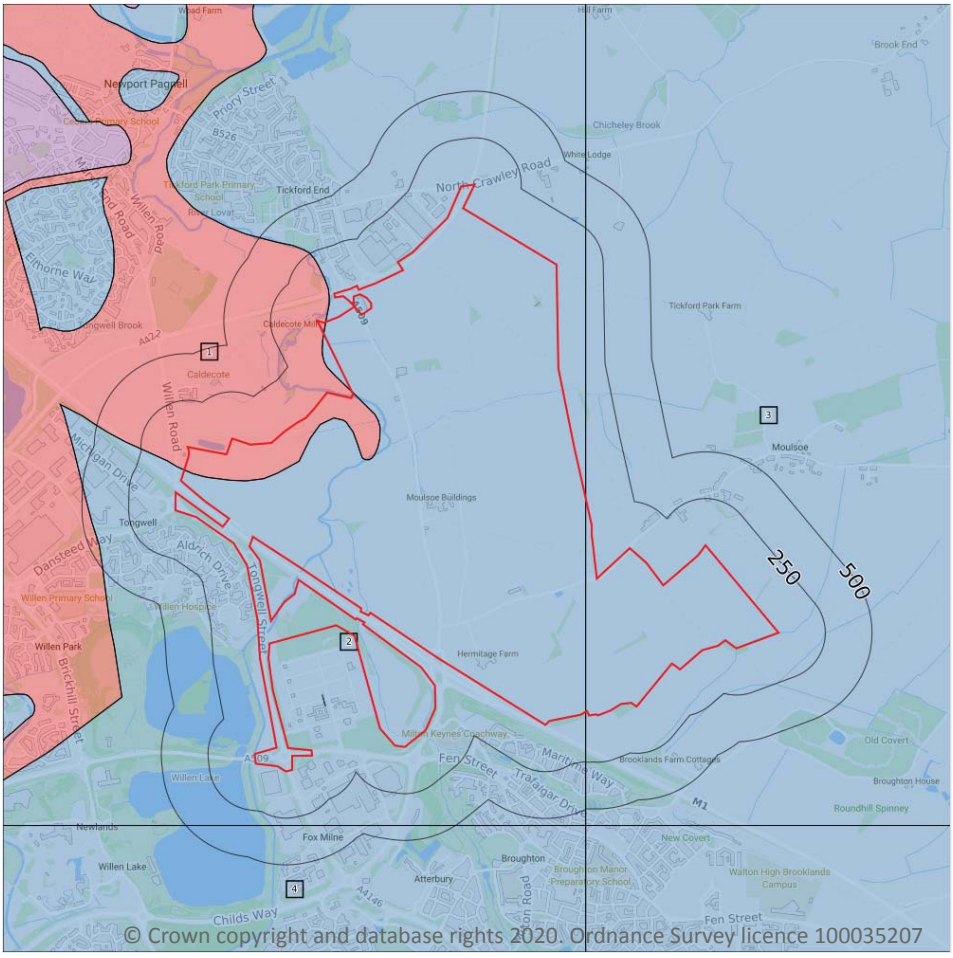
12	**On site**	**Secondary Undifferentiated**	**Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type**
13	100m N	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers
14	102m W	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow
15	118m E	Secondary Undifferentiated	Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type
16	127m N	Secondary Undifferentiated	Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type

ID	Location	Designation	Description
17	150m E	Secondary Undifferentiated	Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type
18	186m SE	Secondary Undifferentiated	Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type
19	194m NW	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers
20	219m W	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers
21	243m S	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers
22	253m SE	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers
23	289m S	Secondary Undifferentiated	Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type
24	293m S	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow
25	304m N	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers
26	308m S	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers
27	326m SE	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers
28	424m S	Secondary Undifferentiated	Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type
29	426m S	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers
30	442m S	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers

ID	Location	Designation	Description
31	481m S	Secondary Undifferentiated	Assigned where it is not possible to attribute either category A or B to a rock type. In general these layers have previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type

This data is sourced from the British Geological Survey, the Environment Agency and Natural Resources Wales.

Bedrock aquifer



5.2 Bedrock aquifer

Records within 500m	4

Aquifer status of groundwater held within bedrock geology.

Features are displayed on the Bedrock aquifer map on **page 103**

ID	Location	Designation	Description
1	On site	Secondary A	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers
2	On site	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow

ID	Location	Designation	Description
3	**On site**	**Unproductive**	**These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow**
4	289m S	Unproductive	These are rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow

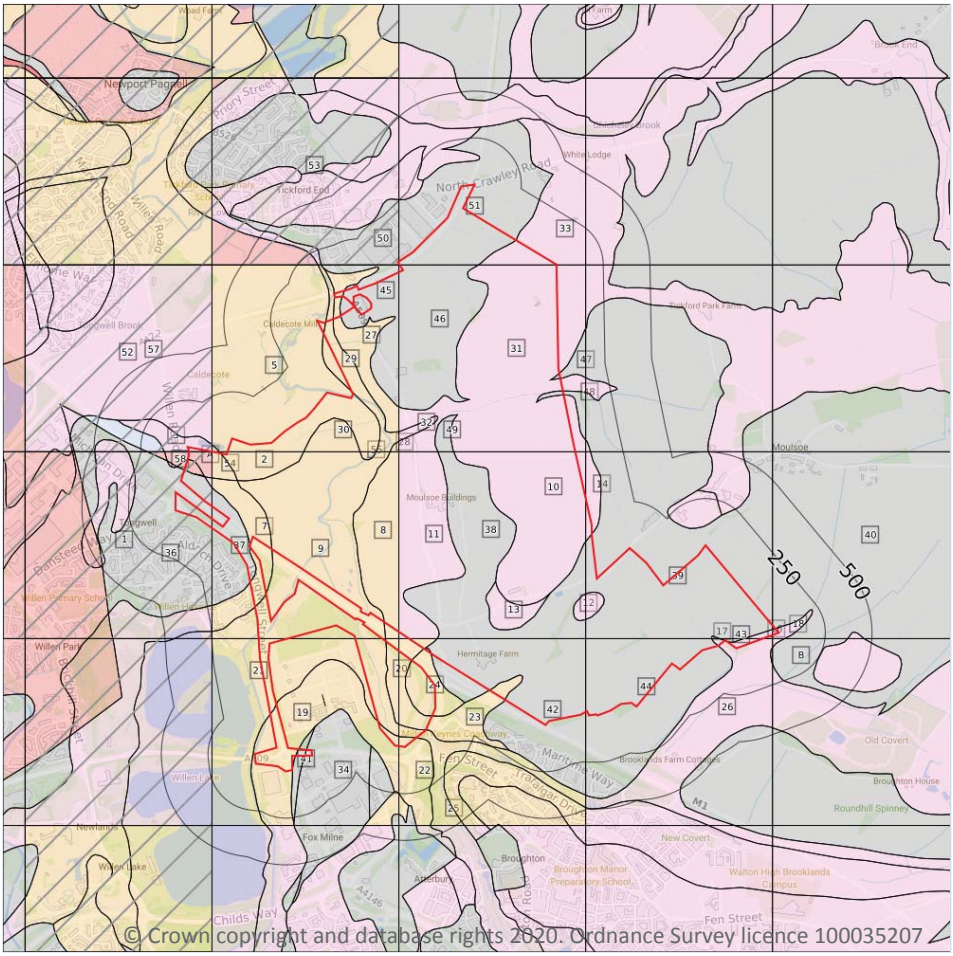
Groundwater vulnerability



Site Outline

Search buffers in metres (m)

Superficial vulnerability
- Principal superficial aquifer, high vulnerability
- Secondary superficial aquifer, high vulnerability
- Principal superficial aquifer, medium vulnerability
- Secondary superficial aquifer, medium vulnerability
- Principal superficial aquifer, low vulnerability
- Secondary superficial aquifer, low vulnerability

Bedrock vulnerability
- Principal bedrock aquifer, high vulnerability
- Secondary bedrock aquifer, high vulnerability
- Principal bedrock aquifer, medium vulnerability
- Secondary bedrock aquifer, medium vulnerability
- Principal bedrock aquifer, low vulnerability
- Secondary bedrock aquifer, low vulnerability

Other information
- Unproductive aquifer
- Soluble rock risk
- Local information

5.3 Groundwater vulnerability

Records within 50m	58

An assessment of the vulnerability of groundwater to a pollutant discharged at ground level based on the hydrological, geological, hydrogeological and soil properties within a one kilometre square grid. Groundwater vulnerability is described as High, Medium or Low as follows:

- High - Areas able to easily transmit pollution to groundwater. They are likely to be characterised by high leaching soils and the absence of low permeability superficial deposits.
- Medium - Intermediate between high and low vulnerability.
- Low - Areas that provide the greatest protection from pollution. They are likely to be characterised by low leaching soils and/or the presence of superficial deposits characterised by a low permeability.

Features are displayed on the Groundwater vulnerability map on **page 105**

ID	Location	Summary	Soil / surface	Superficial geology	Bedrock geology
2	On site	Summary Classification: Secondary superficial aquifer - High Vulnerability Combined classification: Productive Bedrock Aquifer, Productive Superficial Aquifer	Leaching class: Intermediate Infiltration value: >70% Dilution value: <300mm/year	Vulnerability: High Aquifer type: Secondary Thickness: <3m Patchiness value: <90% Recharge potential: High	Vulnerability: High Aquifer type: Secondary Flow mechanism: Well connected fractures
3	On site	Summary Classification: Secondary superficial aquifer - Medium Vulnerability Combined classification: Productive Bedrock Aquifer, Productive Superficial Aquifer	Leaching class: Intermediate Infiltration value: 40-70% Dilution value: <300mm/year	Vulnerability: Medium Aquifer type: Secondary Thickness: 3-10m Patchiness value: >90% Recharge potential: High	Vulnerability: Low Aquifer type: Secondary Flow mechanism: Well connected fractures

This data is sourced from the British Geological Survey, the Environment Agency and Natural Resources Wales.

5.4 Groundwater vulnerability- soluble rock risk

Records on site	3

This dataset identifies areas where solution features that enable rapid movement of a pollutant may be present within a 1km grid square.

ID	Maximum soluble risk category	Percentage of grid square covered by maximum risk
1	**Significant soluble rocks are likely to be present. Low possibility of localised subsidence or dissolution-related degradation of bedrock occurring naturally, but may be possible in adverse conditions such as high surface or subsurface water flow.**	**0.0%**
52	**Significant soluble rocks are likely to be present. Low possibility of localised subsidence or dissolution-related degradation of bedrock occurring naturally, but may be possible in adverse conditions such as high surface or subsurface water flow.**	**0.0%**
53	**Significant soluble rocks are likely to be present. Low possibility of localised subsidence or dissolution-related degradation of bedrock occurring naturally, but may be possible in adverse conditions such as high surface or subsurface water flow.**	**1.0%**

This data is sourced from the British Geological Survey and the Environment Agency.

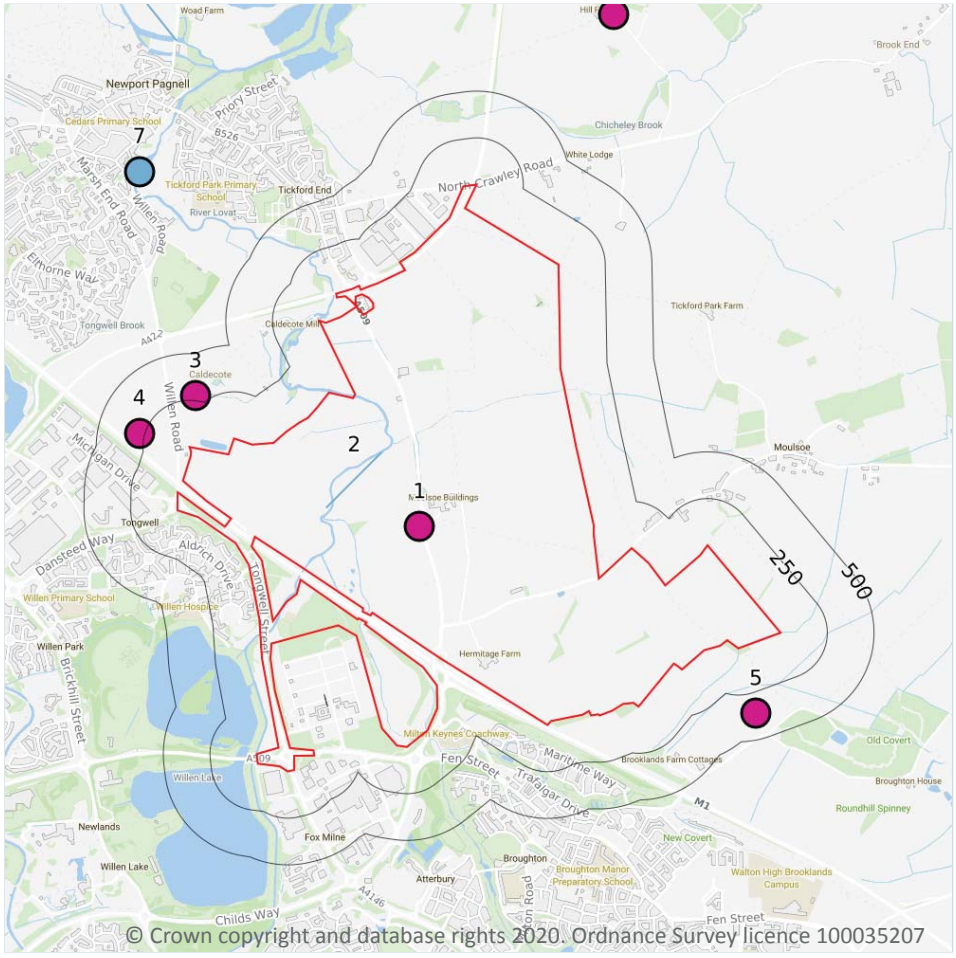
5.5 Groundwater vulnerability- local information

Records on site	0

This dataset identifies areas where additional local information affecting vulnerability is held by the Environment Agency. Further information can be obtained by contacting the Environment Agency local Area groundwater team through the Environment Agency National Customer Call Centre on 03798 506 506 or by email on enquiries@environment-agency.gov.uk.

This data is sourced from the British Geological Survey and the Environment Agency.

Abstractions and Source Protection Zones



Site Outline

Search buffers in metres (m)

- Source Protection Zone 1 — Inner catchment
- Source Protection Zone 2 — Outer catchment
- Source Protection Zone 3 — Total catchment
- Source Protection Zone 4 — Zone of Special Interest
- Source Protection Zone 1c — Inner catchment - confined aquifer
- Source Protection Zone 2c — Outer catchment - confined aquifer
- Source Protection Zone 3c — Total catchment - confined aquifer
- Drinking water abstraction licences
- Drinking water abstraction licences — Polygon features
- Drinking water abstraction licences — Linear features
- Groundwater abstraction licence (point)
- Groundwater abstraction licence (area)
- Groundwater abstraction licence (linear)
- Surface Water Abstractions (point)
- Surface Water Abstractions (area)
- Surface Water Abstractions (linear)

5.6 Groundwater abstractions

Records within 2000m	8

Licensed groundwater abstractions for sites extracting more than 20 cubic metres of water a day and includes active and historical records. The data may be for a single abstraction point, between two points (line data) or a larger area.

Features are displayed on the Abstractions and Source Protection Zones map on **page 117**

This data is sourced from the Environment Agency and Natural Resources Wales.

5.8 Potable abstractions

Records within 2000m	**0**

Licensed potable water abstractions for sites extracting more than 20 cubic metres of water a day and includes active and historical records. The data may be for a single abstraction point, a stretch of watercourse or a larger area.

This data is sourced from the Environment Agency and Natural Resources Wales.

5.9 Source Protection Zones

Records within 500m	0

Source Protection Zones define the sensitivity of an area around a potable abstraction site to contamination.

This data is sourced from the Environment Agency and Natural Resources Wales.

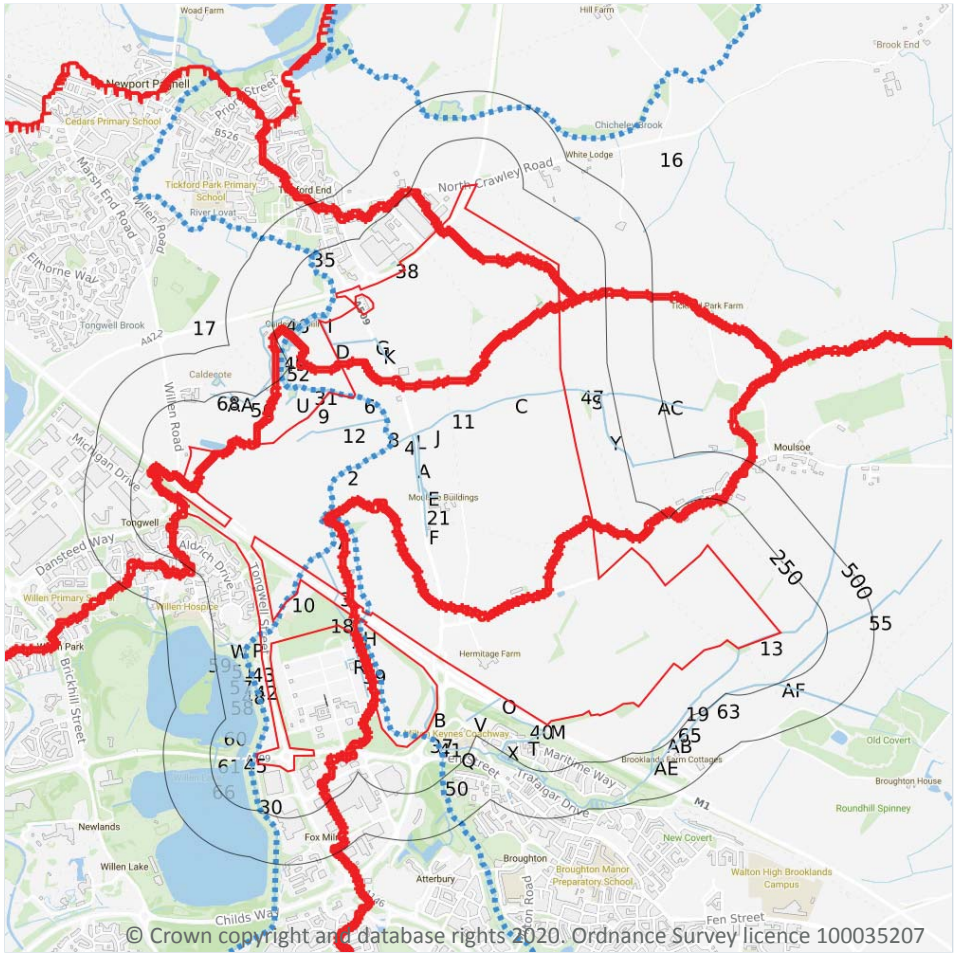
5.10 Source Protection Zones (confined aquifer)

Records within 500m	0

Source Protection Zones in the confined aquifer define the sensitivity around a deep groundwater abstraction to contamination. A confined aquifer would normally be protected from contamination by overlying geology and is only considered a sensitive resource if deep excavation/drilling is taking place.

This data is sourced from the Environment Agency and Natural Resources Wales.

6 Hydrology



6.1 Water Network (OS MasterMap)

Records within 250m	114

Detailed water network of Great Britain showing the flow and precise central course of every river, stream, lake and canal.

Features are displayed on the Hydrology map on **page 122**

This data is sourced from the Ordnance Survey.

6.2 Surface water features

Records within 250m	**29**

Covering rivers, streams and lakes (some overlap with OS MasterMap Water Network data in previous section) but additionally covers smaller features such as ponds. Rivers and streams narrower than 5m are represented as a single line. Lakes, ponds and rivers or streams wider than 5m are represented as polygons.

Features are displayed on the Hydrology map on **page 122**

This data is sourced from the Ordnance Survey.

6.3 WFD Surface water body catchments

Records on site	4

The Water Framework Directive is an EU-led framework for the protection of inland surface waters, estuaries, coastal waters and groundwater through river basin-level management planning. In terms of surface water, these basins are broken down into smaller units known as management, operational and water body catchments.

Features are displayed on the Hydrology map on **page 122**

ID	Location	Type	Water body catchment	Water body ID	Operational catchment	Management catchment
16	**On site**	**River WB catchment**	**Chicheley Brook**	**GB105033038040**	**Bedford Great Ouse**	**Upper and Bedford Ouse**
17	**On site**	**River WB catchment**	**Ouzel DS Caldecote Mill**	**GB105033037972**	**Ouzel and Milton Keynes**	**Upper and Bedford Ouse**
18	**On site**	**River WB catchment**	**Ouzel US Caldecote Mill**	**GB105033037971**	**Ouzel and Milton Keynes**	**Upper and Bedford Ouse**
19	**On site**	**River WB catchment**	**Broughton Brook**	**GB105033037930**	**Ouzel and Milton Keynes**	**Upper and Bedford Ouse**

This data is sourced from the Environment Agency and Natural Resources Wales.

6.4 WFD Surface water bodies

Records identified	4

Surface water bodies under the Directive may be rivers, lakes, estuary or coastal. To achieve the purpose of the Directive, environmental objectives have been set and are reported on for each water body. The progress towards delivery of the objectives is then reported on by the relevant competent authorities at the end of each six-year cycle. The river water body directly associated with the catchment listed in the previous section is detailed below, along with any lake, canal, coastal or artificial water body within 250m of the site. Click on the water body ID in the table to visit the EA Catchment Explorer to find out more about each water body listed.

Features are displayed on the Hydrology map on **page 122**

ID	Location	Type	Name	Water body ID	Overall rating	Chemical rating	Ecological rating	Year
14	**On site**	**River**	**Broughton Brook**	**GB105033037930**	**Poor**	**Good**	**Poor**	**2016**
15	**On site**	**River**	**Ouzel US Caldecote Mill**	**GB105033037971**	**Moderate**	**Good**	**Moderate**	**2016**
34	15m W	River	Ouzel DS Caldecote Mill	GB105033037972	Moderate	Good	Moderate	2016

ID	Location	Type	Name	Water body ID	Overall rating	Chemical rating	Ecological rating	Year
79	352m N	River	Chicheley Brook	GB105033038040	Poor	Good	Poor	2016

This data is sourced from the Environment Agency and Natural Resources Wales.

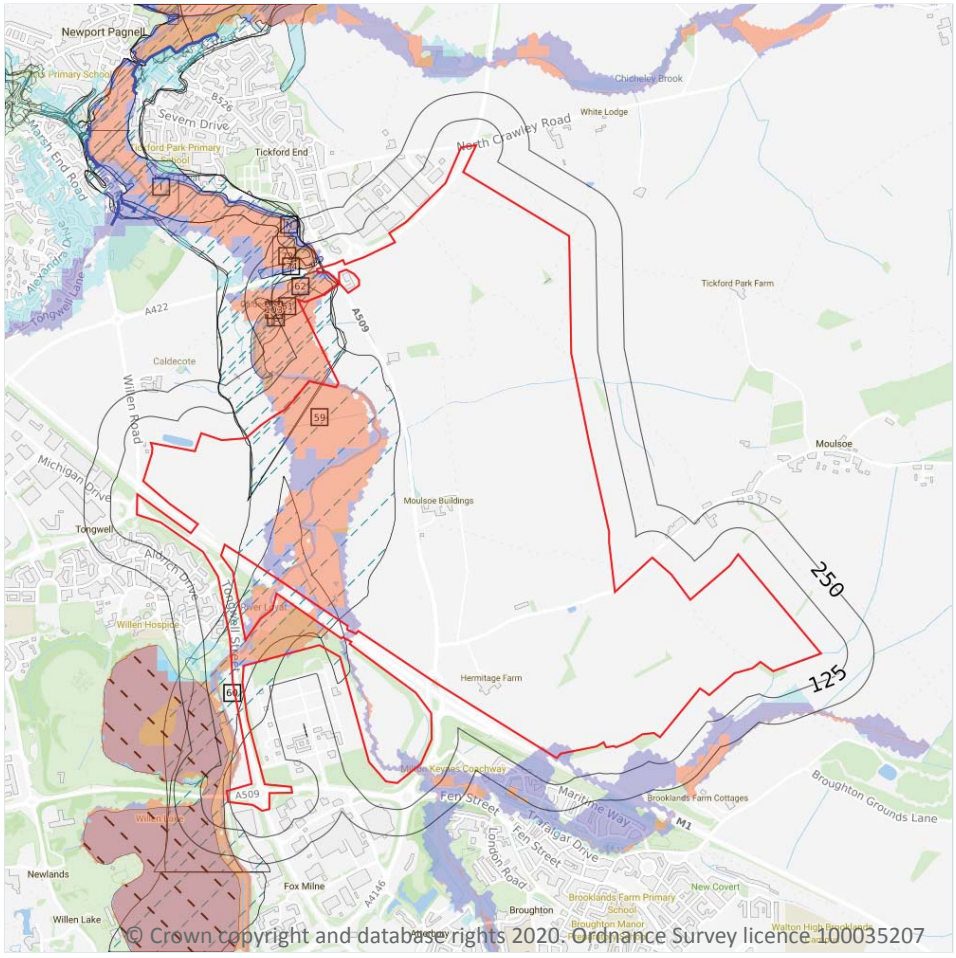
6.5 WFD Groundwater bodies

Records on site	0

Groundwater bodies are also covered by the Directive and the same regime of objectives and reporting detailed in the previous section is in place. Click on the water body ID in the table to visit the EA Catchment Explorer to find out more about each groundwater body listed.

This data is sourced from the Environment Agency and Natural Resources Wales.

7 River and coastal flooding



Site Outline

Search buffers in metres (m)

Environment Agency river and coastal flooding:

- High
- Medium
- Low
- Very Low
- Historical Flood Events
- Areas Used for Flood Storage
- Areas Benefiting from Flood Defences
- Flood Defences

7.1 Risk of Flooding from Rivers and Sea (RoFRaS)

Records within 50m	**103**

The chance of flooding from rivers and/or the sea in any given year, based on cells of 50m. Each cell is allocated one of four flood risk categories, taking into account flood defences and their condition; Very low (less than 1 in 1000 chance in any given year), Low (less than 1 in 100 but greater than or equal to 1 in 1000 chance), Medium (less than 1 in 30 but greater than or equal to 1 in 100 chance) or High (greater than or equal to 1 in 30 chance).

Features are displayed on the River and coastal flooding map on **page 134**

Distance	RoFRaS flood risk
On site	**High**
0 - 50m	High

This data is sourced from the Environment Agency and Natural Resources Wales.

7.2 Historical Flood Events

Records within 250m	**12**

Records of historic flooding from rivers, the sea, groundwater and surface water. Records began in 1946 when predecessor bodies started collecting detailed information about flooding incidents, although limited details may be included on flooding incidents prior to this date. Takes into account the presence of defences, structures, and other infrastructure where they existed at the time of flooding, and includes flood extents that may have been affected by overtopping, breaches or blockages.

Features are displayed on the River and coastal flooding map on **page 134**

ID	Location	Event name	Date of flood	Flood source	Flood cause	Type of flood
59	**On site**	**March 1947**	**1947-01-01 1947-12-31**	**Unknown**	**Unknown**	**Fluvial**

74	19m NW	September 1992	1992-01-01 1992-12-31	Unknown	Unknown	Fluvial
103	94m SW	September 1992	1992-01-01 1992-12-31	Unknown	Unknown	Fluvial
N	189m NW	September 1992	1992-01-01 1992-12-31	Unknown	Unknown	Fluvial

This data is sourced from the Environment Agency and Natural Resources Wales.

7.3 Flood Defences

Records within 250m	0

Records of flood defences owned, managed or inspected by the Environment Agency and Natural Resources Wales. Flood defences can be structures, buildings or parts of buildings. Typically these are earth banks, stone and concrete walls, or sheet-piling that is used to prevent or control the extent of flooding.

This data is sourced from the Environment Agency and Natural Resources Wales.

7.4 Areas Benefiting from Flood Defences

Records within 250m	0

Areas that would benefit from the presence of flood defences in a 1 in 100 (1%) chance of flooding each year from rivers or 1 in 200 (0.5%) chance of flooding each year from the sea.

This data is sourced from the Environment Agency and Natural Resources Wales.

7.5 Flood Storage Areas

Records within 250m	1

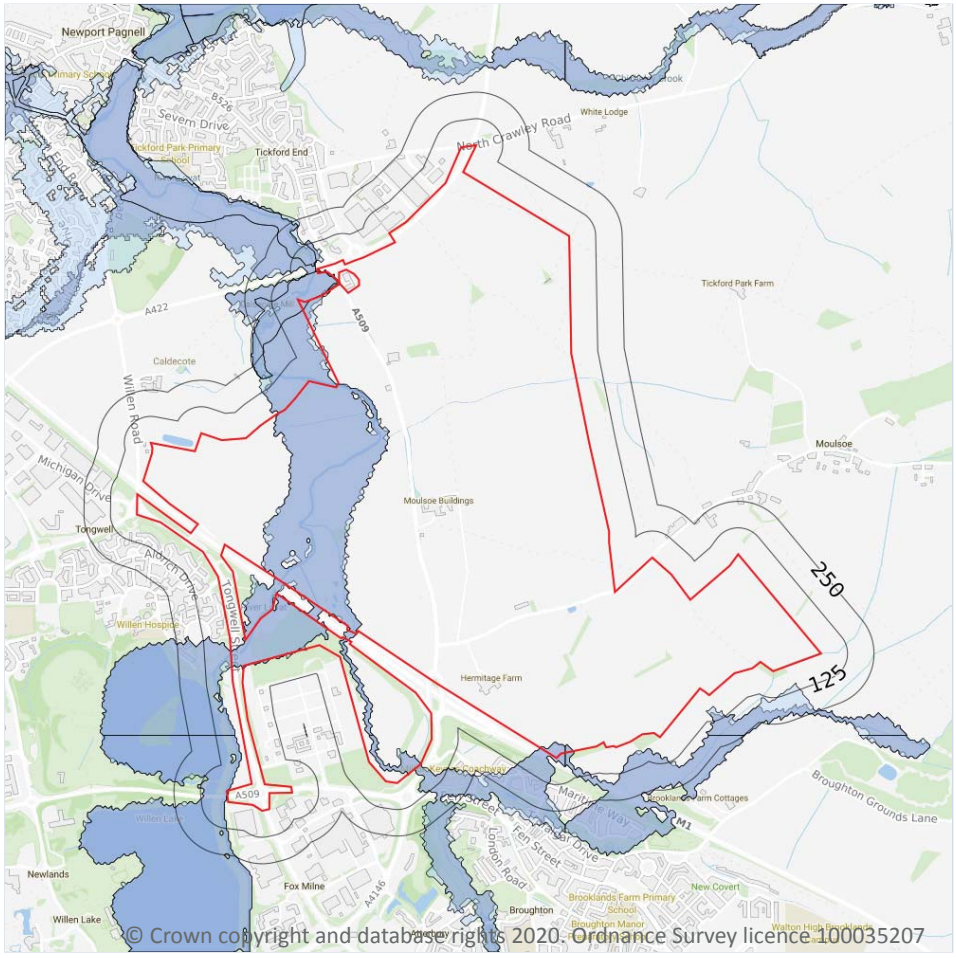
Areas that act as a balancing reservoir, storage basin or balancing pond to attenuate an incoming flood peak to a flow level that can be accepted by the downstream channel or to delay the timing of a flood peak so that its volume is discharged over a longer period.

Features are displayed on the River and coastal flooding map on **page 134**

ID	Location	Update
J	48m W	Flood Storage Area

This data is sourced from the Environment Agency and Natural Resources Wales.

River and coastal flooding - Flood Zones



Site Outline

Search buffers in metres (m)

Flood zone 2

Flood zone 3

7.6 Flood Zone 2

Records within 50m	1

Areas of land at risk of flooding, when the presence of flood defences are ignored. Covering land between Flood Zone 3 (see next section) and the extent of the flooding from rivers or the sea with a 1 in 1000 (0.1%) chance of flooding each year.

Features are displayed on the River and coastal flooding map on **page 134**

Location	Type
On site	**Zone 2 - (Fluvial /Tidal Models)**

This data is sourced from the Environment Agency and Natural Resources Wales.

7.7 Flood Zone 3

Records within 50m	1

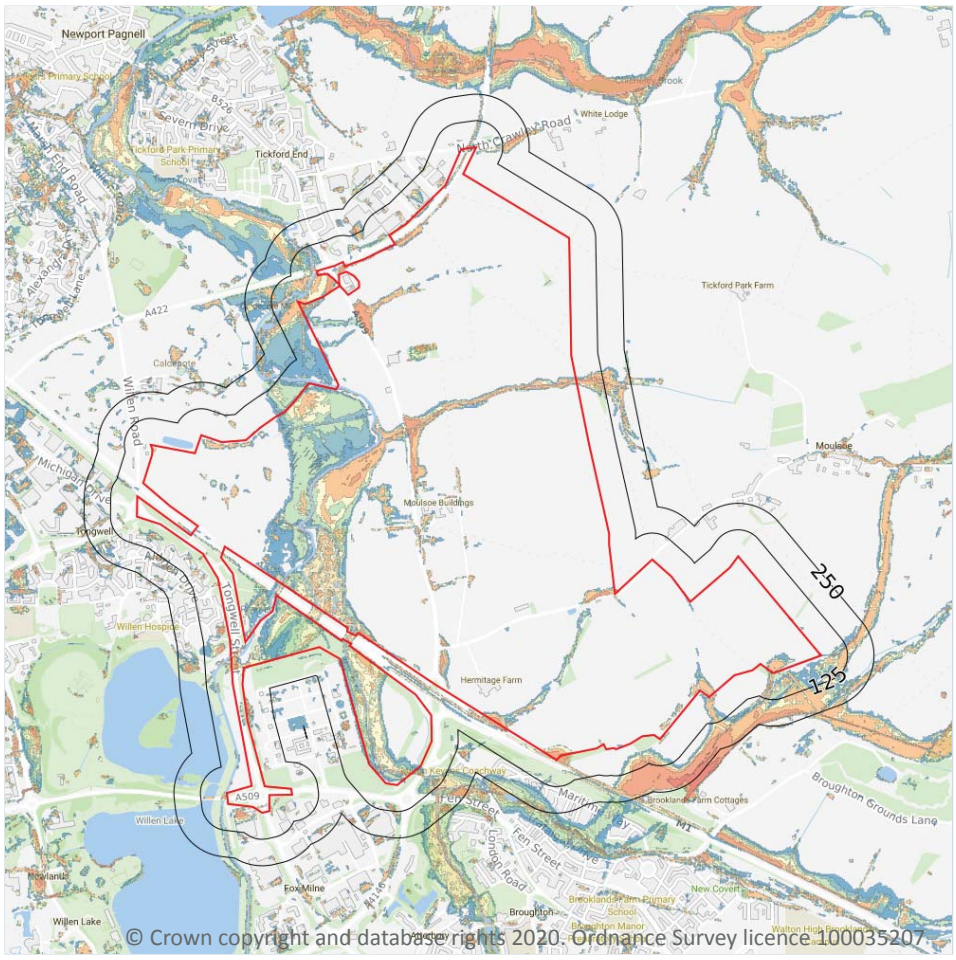
Areas of land at risk of flooding, when the presence of flood defences are ignored. Covering land with a 1 in 100 (1%) or greater chance of flooding each year from rivers or a 1 in 200 (0.5%) or greater chance of flooding each year from the sea.

Features are displayed on the River and coastal flooding map on **page 134**

Location	Type
On site	**Zone 3 - (Fluvial Models)**

This data is sourced from the Environment Agency and Natural Resources Wales.

8 Surface water flooding



Site Outline
Search buffers in metres (m)

1 in 1000 return period
- Depth between 0.1m - 0.3m
- Depth between 0.3m - 1.0m
- Depth greater than 1.0m

1 in 250 return period
- Depth between 0.1m - 0.3m
- Depth between 0.3m - 1.0m
- Depth greater than 1.0m

1 in 100 return period
- Depth between 0.1m - 0.3m
- Depth between 0.3m - 1.0m
- Depth greater than 1.0m

1 in 30 return period
- Depth between 0.1m - 0.3m
- Depth between 0.3m - 1.0m
- Depth greater than 1.0m

8.1 Surface water flooding

Highest risk on site	**1 in 30 year, Greater than 1.0m**
Highest risk within 50m	**1 in 30 year, Greater than 1.0m**

Ambiental Risk Analytics surface water (pluvial) FloodMap identifies areas likely to flood as a result of extreme rainfall events, i.e. land naturally vulnerable to surface water ponding or flooding. This data set was produced by simulating 1 in 30 year, 1 in 100 year, 1 in 250 year and 1 in 1,000 year rainfall events. Modern urban drainage systems are typically built to cope with rainfall events between 1 in 20 and 1 in 30 years, though some older ones may flood in a 1 in 5 year rainfall event.

Features are displayed on the Surface water flooding map on **page 139**

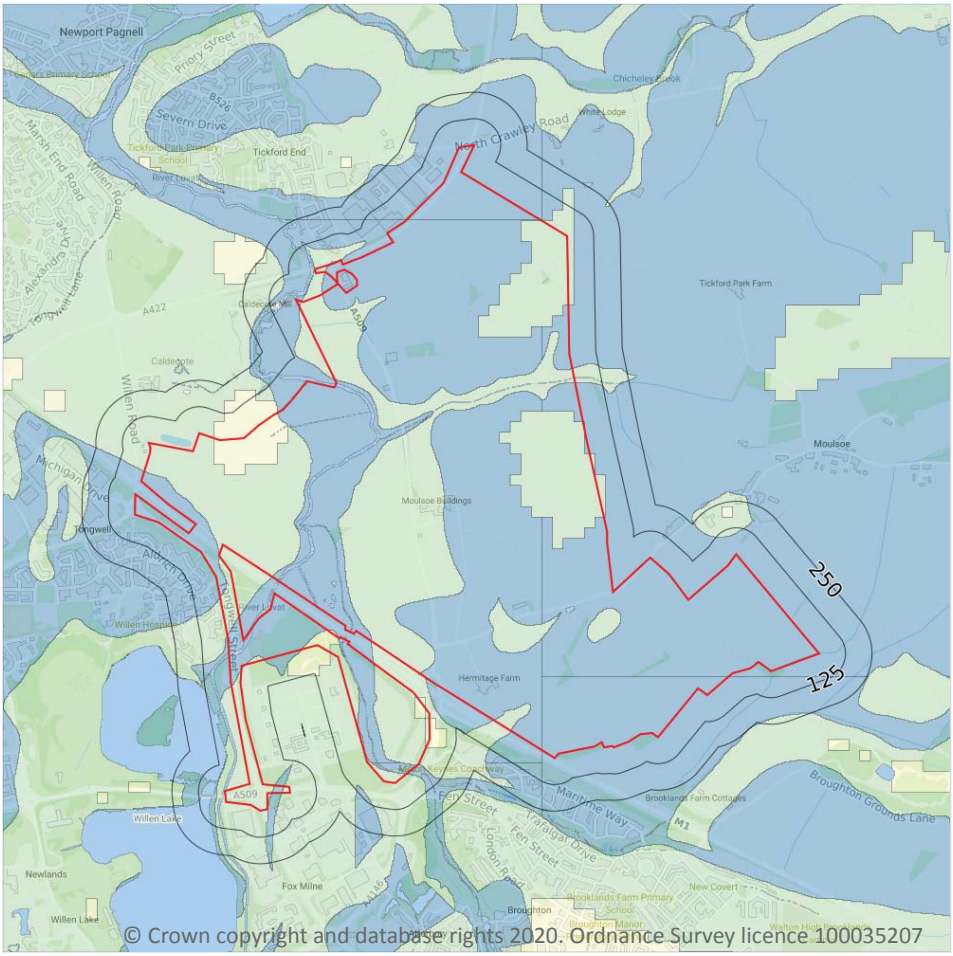
The data shown on the map and in the table above shows the highest likelihood of flood events happening at the site. Lower likelihood events may have greater flood depths and hence a greater potential impact on a site.

The table below shows the maximum flood depths for a range of return periods for the site.

Return period	Maximum modelled depth
1 in 1000 year	Greater than 1.0m
1 in 250 year	Greater than 1.0m
1 in 100 year	Greater than 1.0m
1 in 30 year	Greater than 1.0m

This data is sourced from Ambiental Risk Analytics.

9 Groundwater flooding



Site Outline

Search buffers in metres (m)

- High
- Moderate - High
- Moderate
- Low
- Negligible

9.1 Groundwater flooding

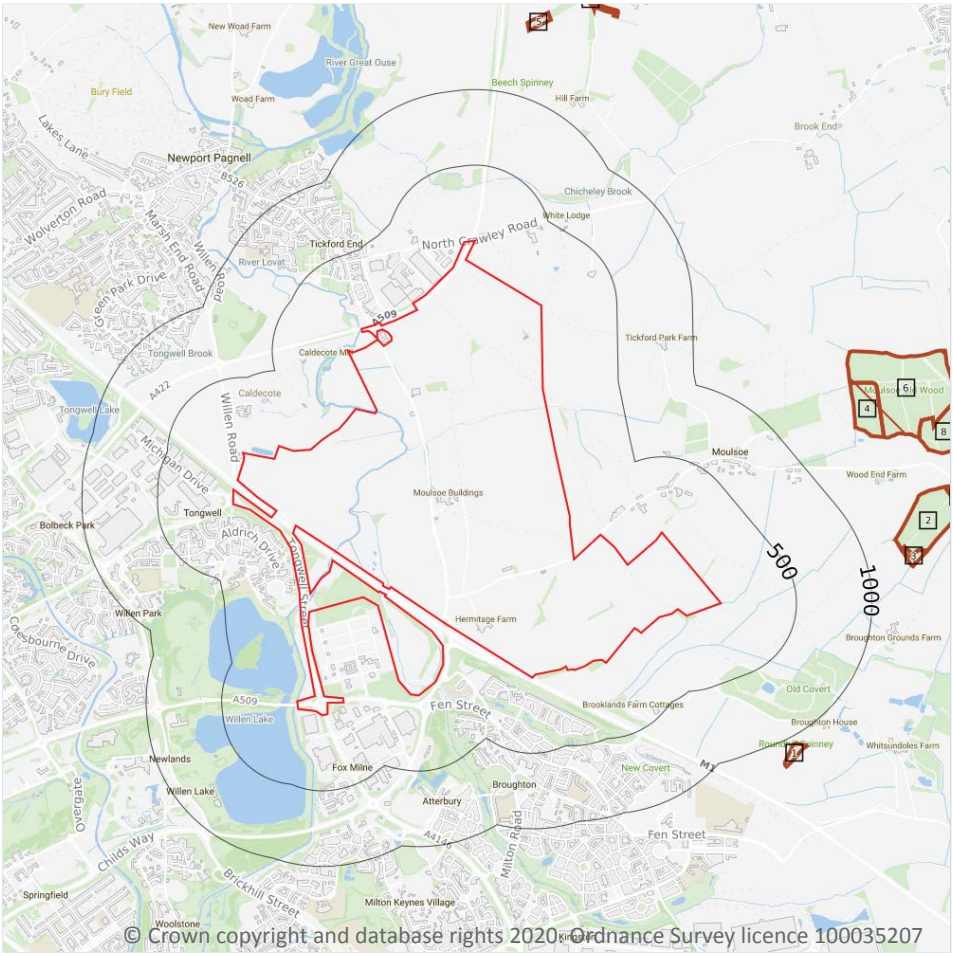
Highest risk on site	**Moderate**
Highest risk within 50m	**Moderate**

Groundwater flooding is caused by unusually high groundwater levels. It occurs when the water table rises above the ground surface or within underground structures such as basements or cellars. Groundwater flooding tends to exhibit a longer duration than surface water flooding, possibly lasting for weeks or months, and as a result it can cause significant damage to property. This risk assessment is based on a 1 in 100 year return period and a 5m Digital Terrain Model (DTM).

Features are displayed on the Groundwater flooding map on **page 141**

This data is sourced from Ambiental Risk Analytics.

10 Environmental designations



10.1 Sites of Special Scientific Interest (SSSI)

Records within 2000m	0

Sites providing statutory protection for the best examples of UK flora, fauna, or geological or physiographical features. Originally notified under the National Parks and Access to the Countryside Act 1949, SSSIs were re-notified under the Wildlife and Countryside Act 1981. Improved provisions for the protection and management of SSSIs were introduced by the Countryside and Rights of Way Act 2000 (in England and Wales) and (in Scotland) by the Nature Conservation (Scotland) Act 2004 and the Wildlife and Natural Environment (Scotland) Act 2010.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.2 Conserved wetland sites (Ramsar sites)

Records within 2000m	0

Ramsar sites are designated under the Convention on Wetlands of International Importance, agreed in Ramsar, Iran, in 1971. They cover all aspects of wetland conservation and wise use, recognizing wetlands as ecosystems that are extremely important for biodiversity conservation in general and for the well-being of human communities. These sites cover a broad definition of wetland; marsh, fen, peatland or water, whether natural or artificial, permanent or temporary, with water that is static or flowing, fresh, brackish or salt, and even some marine areas.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.3 Special Areas of Conservation (SAC)

Records within 2000m	0

Areas which have been identified as best representing the range and variety within the European Union of habitats and (non-bird) species listed on Annexes I and II to the Directive. SACs are designated under the EC Habitats Directive.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.4 Special Protection Areas (SPA)

Records within 2000m	0

Sites classified by the UK Government under the EC Birds Directive, SPAs are areas of the most important habitat for rare (listed on Annex I to the Directive) and migratory birds within the European Union.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.5 National Nature Reserves (NNR)

Records within 2000m	0

Sites containing examples of some of the most important natural and semi-natural terrestrial and coastal ecosystems in Great Britain. They are managed to conserve their habitats, provide special opportunities for scientific study or to provide public recreation compatible with natural heritage interests.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.6 Local Nature Reserves (LNR)

Records within 2000m	0

Sites managed for nature conservation, and to provide opportunities for research and education, or simply enjoying and having contact with nature. They are declared by local authorities under the National Parks and Access to the Countryside Act 1949 after consultation with the relevant statutory nature conservation agency.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.7 Designated Ancient Woodland

Records within 2000m	11

Ancient woodlands are classified as areas which have been wooded continuously since at least 1600 AD. This includes semi-natural woodland and plantations on ancient woodland sites. 'Wooded continuously' does not mean there is or has previously been continuous tree cover across the whole site, and not all trees within the woodland have to be old.

Features are displayed on the Environmental designations map on **page 142**

ID	Location	Name	Woodland Type
1	1052m SE	Roundhill Spinney	Ancient & Semi-Natural Woodland
2	1232m E	Lower Wood	Ancient Replanted Woodland
3	1247m E	Lower Wood	Ancient & Semi-Natural Woodland
4	1428m NE	Moulsoe Old Wood	Ancient & Semi-Natural Woodland
5	1435m N	Mouthslade Spinney	Ancient & Semi-Natural Woodland
6	1533m NE	Moulsoe Old Wood	Ancient Replanted Woodland
7	1672m NE	Lower Wood	Ancient & Semi-Natural Woodland
8	1705m NE	Moulsoe Old Wood	Ancient & Semi-Natural Woodland
9	1719m NE	Newfield Spinney	Ancient & Semi-Natural Woodland
-	1725m E	Unknown	Ancient & Semi-Natural Woodland
-	1836m N	Longclose Spinney	Ancient & Semi-Natural Woodland

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.8 Biosphere Reserves

Records within 2000m	0

Biosphere Reserves are internationally recognised by UNESCO as sites of excellence to balance conservation and socioeconomic development between nature and people. They are recognised under the Man and the Biosphere (MAB) Programme with the aim of promoting sustainable development founded on the work of the local community.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.9 Forest Parks

Records within 2000m	0

These are areas managed by the Forestry Commission designated on the basis of recreational, conservation or scenic interest.

This data is sourced from the Forestry Commission.

10.10 Marine Conservation Zones

Records within 2000m	0

A type of marine nature reserve in UK waters established under the Marine and Coastal Access Act (2009). They are designated with the aim to protect nationally important, rare or threatened habitats and species.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

10.11 Green Belt

Records within 2000m	0

Areas designated to prevent urban sprawl by keeping land permanently open.

This data is sourced from the Ministry of Housing, Communities and Local Government.

10.12 Proposed Ramsar sites

Records within 2000m	0

Ramsar sites are areas listed as a Wetland of International Importance under the Convention on Wetlands of International Importance especially as Waterfowl Habitat (the Ramsar Convention) 1971. The sites here supplied have a status of 'Proposed' having been identified for potential adoption under the framework.

This data is sourced from Natural England.

10.13 Possible Special Areas of Conservation (pSAC)

Records within 2000m	0

Special Areas of Conservation are areas which have been identified as best representing the range and variety within the European Union of habitats and (non-bird) species listed on Annexes I and II to the Directive. SACs are designated under the EC Habitats Directive. Those sites supplied here are those with a status of 'Possible' having been identified for potential adoption under the framework.

This data is sourced from Natural England and Natural Resources Wales.

10.14 Potential Special Protection Areas (pSPA)

Records within 2000m	0

Special Protection Areas (SPAs) are areas designated (or 'classified') under the European Union Wild Birds Directive for the protection of nationally and internationally important populations of wild birds. Those sites supplied here are those with a status of 'Potential' having been identified for potential adoption under the framework.

This data is sourced from Natural England.

10.15 Nitrate Sensitive Areas

Records within 2000m	0

Areas where nitrate concentrations in drinking water sources exceeded or was at risk of exceeding the limit of 50 mg/l set by the 1980 EC Drinking Water Directive. Voluntary agricultural measures as a means of reducing the levels of nitrate were introduced by DEFRA as MAFF, with payments being made to farmers who complied. The scheme was started as a pilot in 1990 in ten areas, later implemented within 32 areas. The scheme was closed to further new entrants in 1998, although existing agreements continued for their full term. All Nitrate Sensitive Areas fell within the areas designated as Nitrate Vulnerable Zones (NVZs) in 1996 under the EC Nitrate Directive (91/676/EEC).

This data is sourced from Natural England.

10.16 Nitrate Vulnerable Zones

Records within 2000m	2

Areas at risk from agricultural nitrate pollution designated under the EC Nitrate Directive (91/676/EEC). These are areas of land that drain into waters polluted by nitrates. Farmers operating within these areas have to follow mandatory rules to tackle nitrate loss from agriculture.

Location	Name	Type	NVZ ID	Status
On site	**Great Ouse NVZ**	**Surface Water**	**S391**	**Existing**

Location	Name	Type	NVZ ID	Status
665m NW	Bedford Great Oolite	Groundwater	G74	Existing

This data is sourced from Natural England and Natural Resources Wales.

SSSI Impact Zones and Units

Site Outline

Search buffers in metres (m)

SSSI Impact Risk Zones

SSSI Units

- Not recorded
- Favourable
- Unfavourable - Recovering
- Unfavourable - No change
- Unfavourable - Declining
- Partially destroyed
- Destroyed

10.17 SSSI Impact Risk Zones

Records on site	1

Developed to allow rapid initial assessment of the potential risks to SSSIs posed by development proposals. They define zones around each SSSI which reflect the particular sensitivities of the features for which it is notified and indicate the types of development proposal which could potentially have adverse impacts.

Features are displayed on the SSSI Impact Zones and Units map on **page 148**

ID	Location	Type of developments requiring consultation
1	**On site**	**Infrastructure - Airports, helipads and other aviation proposals.**

This data is sourced from Natural England.

10.18 SSSI Units

Records within 2000m	0

Divisions of SSSIs used to record management and condition details. Units are the smallest areas for which Natural England gives a condition assessment, however, the size of units varies greatly depending on the types of management and the conservation interest.

This data is sourced from Natural England and Natural Resources Wales.

11 Visual and cultural designations

Site Outline

Search buffers in metres (m)

- Listed buildings
- Conservation areas
- Conservation areas - no data
- National Parks
- Areas of Outstanding Natural Beauty
- Registered parks and gardens
- Scheduled Monuments
- World Heritage Sites

11.1 World Heritage Sites

Records within 250m	0

Sites designated for their globally important cultural or natural interest requiring appropriate management and protection measures. World Heritage Sites are designated to meet the UK's commitments under the World Heritage Convention.

This data is sourced from Historic England, Cadw and Historic Environment Scotland.

11.2 Area of Outstanding Natural Beauty

Records within 250m	0

Areas of Outstanding Natural Beauty (AONB) are conservation areas, chosen because they represent 18% of the finest countryside. Each AONB has been designated for special attention because of the quality of their flora, fauna, historical and cultural associations, and/or scenic views. The National Parks and Access to the Countryside Act of 1949 created AONBs and the Countryside and Rights of Way Act, 2000 added further regulation and protection. There are likely to be restrictions to some developments within these areas.

This data is sourced from Natural England, Natural Resources Wales and Scottish Natural Heritage.

11.3 National Parks

Records within 250m	0

In England and Wales, the purpose of National Parks is to conserve and enhance landscapes within the countryside whilst promoting public enjoyment of them and having regard for the social and economic well-being of those living within them. In Scotland National Parks have the additional purpose of promoting the sustainable use of the natural resources of the area and the sustainable social and economic development of its communities. The National Parks and Access to the Countryside Act 1949 established the National Park designation in England and Wales, and The National Parks (Scotland) Act 2000 in Scotland.

This data is sourced from Natural England, Natural Resources Wales and the Scottish Government.

11.4 Listed Buildings

Records within 250m	2

Buildings listed for their special architectural or historical interest. Building control in the form of 'listed building consent' is required in order to make any changes to that building which might affect its special interest. Listed buildings are graded to indicate their relative importance, however building controls apply to all buildings equally, irrespective of their grade, and apply to the interior and exterior of the building in its entirety, together with any curtilage structures.

Features are displayed on the Visual and cultural designations map on **page 150**

ID	Location	Name	Grade	Reference Number	Listed date
1	**On site**	**Moulsoe Buildings Farmhouse, Moulsoe, Milton Keynes, MK16**	**II**	**1212914**	**16/02/1984**
3	245m N	Church Of St Mary, Moulsoe, Milton Keynes, MK16	I	1212922	17/11/1966

This data is sourced from English Heritage, Cadw and Historic Environment Scotland.

11.5 Conservation Areas

Records within 250m	1

Local planning authorities are obliged to designate as conservation areas any parts of their own area that are of special architectural or historic interest, the character and appearance of which it is desirable to preserve or enhance. Designation of a conservation area gives broader protection than the listing of individual buildings. All the features within the area, listed or otherwise, are recognised as part of its character. Conservation area designation is the means of recognising the importance of all factors and of ensuring that planning decisions address the quality of the landscape in its broadest sense.

Features are displayed on the Visual and cultural designations map on **page 150**

ID	Location	Name	District	Date of designation
2	238m W	Willen	Milton Keynes	08/02/1978

This data is sourced from English Heritage, Cadw and Historic Environment Scotland.

11.6 Scheduled Ancient Monuments

Records within 250m	0

A scheduled monument is an historic building or site that is included in the Schedule of Monuments kept by the Secretary of State for Digital, Culture, Media and Sport. The regime is set out in the Ancient Monuments and Archaeological Areas Act 1979. The Schedule of Monuments has c.20,000 entries and includes sites such as Roman remains, burial mounds, castles, bridges, earthworks, the remains of deserted villages and industrial sites. Monuments are not graded, but all are, by definition, considered to be of national importance.

This data is sourced from English Heritage, Cadw and Historic Environment Scotland.

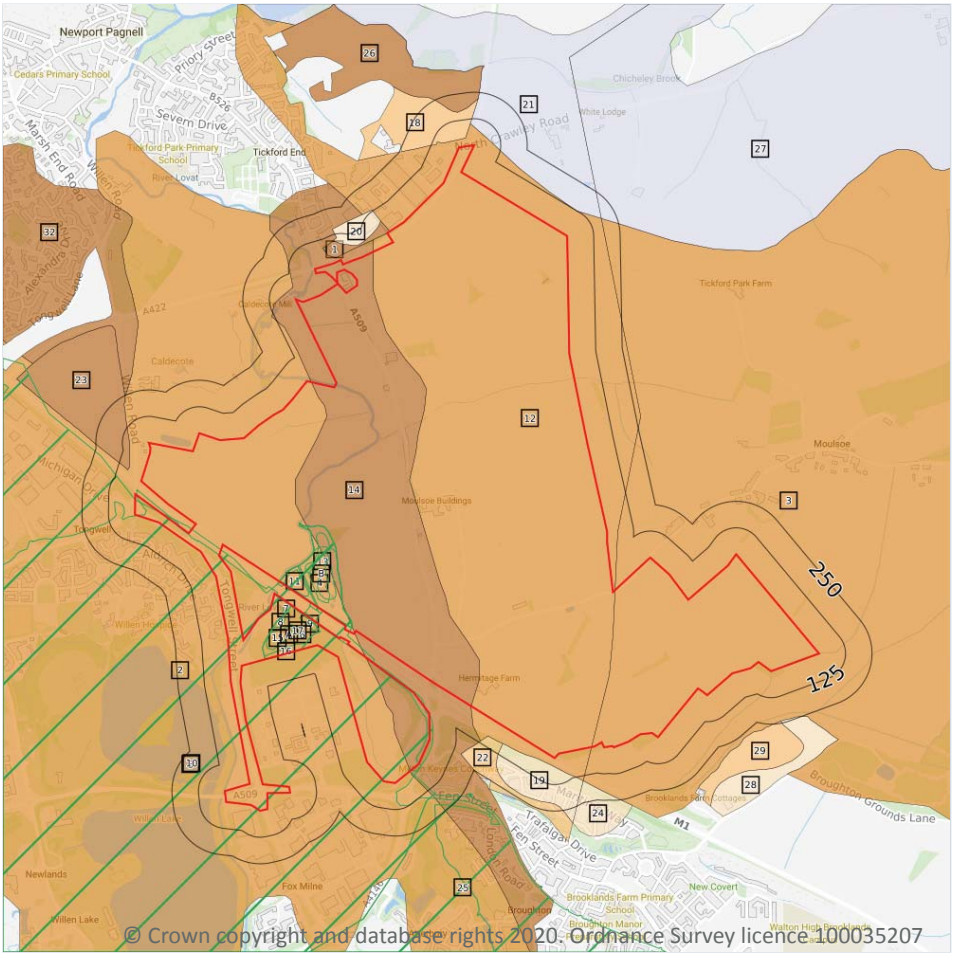
11.7 Registered Parks and Gardens

Records within 250m	0

Parks and gardens assessed to be of particular interest and of special historic interest. The emphasis being on 'designed' landscapes, rather than on planting or botanical importance. Registration is a 'material consideration' in the planning process, meaning that planning authorities must consider the impact of any proposed development on the special character of the landscape.

This data is sourced from English Heritage, Cadw and Historic Environment Scotland.

12 Agricultural designations



Site Outline

Search buffers in metres (m)

- Grade 1 - excellent quality
- Grade 2 - very good quality
- Grade 3 - good to moderate quality
- Grade 3a - good quality
- Grade 3b - moderate quality
- Grade 4 - poor quality
- Grade 5 - very poor quality
- Non-agricultural land
- Urban land
- Exclusion land
- Tree felling licences
- Open Access land

12.1 Agricultural Land Classification

Records within 250m	17

Classification of the quality of agricultural land taking into consideration multiple factors including climate, physical geography and soil properties. It should be noted that the categories for the grading of agricultural land are not consistent across England, Wales and Scotland.

Features are displayed on the Agricultural designations map on **page 153**

ID	Location	Classification	Description
1	**On site**	**Grade 2**	**Very good quality agricultural land. Land with minor limitations which affect crop yield, cultivations or harvesting. A wide range of agricultural and horticultural crops can usually be grown but on some land in the grade there may be reduced flexibility due to difficulties with the production of the more demanding crops such as winter harvested vegetables and arable root crops. The level of yield is generally high but may be lower or more variable than Grade 1.**
2	**On site**	**Grade 3**	**Good to moderate quality agricultural land. Land with moderate limitations which affect the choice of crops, timing and type of cultivation, harvesting or the level of yield. Where more demanding crops are grown yields are generally lower or more variable than on land in Grades 1 and 2.**
3	**On site**	**Grade 3**	**Good to moderate quality agricultural land. Land with moderate limitations which affect the choice of crops, timing and type of cultivation, harvesting or the level of yield. Where more demanding crops are grown yields are generally lower or more variable than on land in Grades 1 and 2.**
12	**On site**	**Grade 3**	**Good to moderate quality agricultural land. Land with moderate limitations which affect the choice of crops, timing and type of cultivation, harvesting or the level of yield. Where more demanding crops are grown yields are generally lower or more variable than on land in Grades 1 and 2.**
14	**On site**	**Grade 2**	**Very good quality agricultural land. Land with minor limitations which affect crop yield, cultivations or harvesting. A wide range of agricultural and horticultural crops can usually be grown but on some land in the grade there may be reduced flexibility due to difficulties with the production of the more demanding crops such as winter harvested vegetables and arable root crops. The level of yield is generally high but may be lower or more variable than Grade 1.**
18	36m N	Grade 3a	Good quality agricultural land. Land capable of consistently producing moderate to high yields of a narrow range of arable crops, especially cereals, or moderate yields of a wide range of crops including cereals, grass, oilseed rape, potatoes, sugar beet and the less demanding horticultural crops.
19	37m SW	Grade 3b	Moderate quality agricultural land. Land capable of producing moderate yields of a narrow range of crops, principally cereals and grass or lower yields of a wider range of crops or high yields of grass which can be grazed or harvested over most of the year.
20	53m NW	Grade 3b	Moderate quality agricultural land. Land capable of producing moderate yields of a narrow range of crops, principally cereals and grass or lower yields of a wider range of crops or high yields of grass which can be grazed or harvested over most of the year.
21	65m NE	Grade 4	Poor quality agricultural land. Land with severe limitations which significantly restrict the range of crops and/or level of yields. It is mainly suited to grass with occasional arable crops (e.g. cereals and forage crops) the yields of which are variable. In moist climates, yields of grass may be moderate to high but there may be difficulties in utilisation. The grade also includes very droughty arable land.
22	72m SW	Grade 3a	Good quality agricultural land. Land capable of consistently producing moderate to high yields of a narrow range of arable crops, especially cereals, or moderate yields of a wide range of crops including cereals, grass, oilseed rape, potatoes, sugar beet and the less demanding horticultural crops.

ID	Location	Classification	Description
23	73m W	Grade 2	Very good quality agricultural land. Land with minor limitations which affect crop yield, cultivations or harvesting. A wide range of agricultural and horticultural crops can usually be grown but on some land in the grade there may be reduced flexibility due to difficulties with the production of the more demanding crops such as winter harvested vegetables and arable root crops. The level of yield is generally high but may be lower or more variable than Grade 1.
24	149m S	Grade 3b	Moderate quality agricultural land. Land capable of producing moderate yields of a narrow range of crops, principally cereals and grass or lower yields of a wider range of crops or high yields of grass which can be grazed or harvested over most of the year.
26	165m N	Grade 2	Very good quality agricultural land. Land with minor limitations which affect crop yield, cultivations or harvesting. A wide range of agricultural and horticultural crops can usually be grown but on some land in the grade there may be reduced flexibility due to difficulties with the production of the more demanding crops such as winter harvested vegetables and arable root crops. The level of yield is generally high but may be lower or more variable than Grade 1.
27	182m NE	Grade 4	Poor quality agricultural land. Land with severe limitations which significantly restrict the range of crops and/or level of yields. It is mainly suited to grass with occasional arable crops (e.g. cereals and forage crops) the yields of which are variable. In moist climates, yields of grass may be moderate to high but there may be difficulties in utilisation. The grade also includes very droughty arable land.
28	239m S	Grade 3b	Moderate quality agricultural land. Land capable of producing moderate yields of a narrow range of crops, principally cereals and grass or lower yields of a wider range of crops or high yields of grass which can be grazed or harvested over most of the year.
29	240m S	Grade 3a	Good quality agricultural land. Land capable of consistently producing moderate to high yields of a narrow range of arable crops, especially cereals, or moderate yields of a wide range of crops including cereals, grass, oilseed rape, potatoes, sugar beet and the less demanding horticultural crops.
32	247m NW	Grade 2	Very good quality agricultural land. Land with minor limitations which affect crop yield, cultivations or harvesting. A wide range of agricultural and horticultural crops can usually be grown but on some land in the grade there may be reduced flexibility due to difficulties with the production of the more demanding crops such as winter harvested vegetables and arable root crops. The level of yield is generally high but may be lower or more variable than Grade 1.

This data is sourced from Natural England.

12.2 Open Access Land

Records within 250m	**0**

The Countryside and Rights of Way Act 2000 (CROW Act) gives a public right of access to land without having to use paths. Access land includes mountains, moors, heaths and downs that are privately owned. It also includes common land registered with the local council and some land around the England Coast Path. Generally permitted activities on access land are walking, running, watching wildlife and climbing.

This data is sourced from Natural England and Natural Resources Wales.

12.3 Tree Felling Licences

Records within 250m	17

Felling Licence Application (FLA) areas approved by Forestry Commission England. Anyone wishing to fell trees must ensure that a licence or permission under a grant scheme has been issued by the Forestry Commission before any felling is carried out or that one of the exceptions apply.

Features are displayed on the Agricultural designations map on **page 153**

13.2 Habitat Networks

Records within 250m	**0**

Habitat networks for 18 priority habitat networks (based primarily, but not exclusively, on the priority habitat inventory) and areas suitable for the expansion of networks through restoration and habitat creation.

This data is sourced from Natural England.

13.3 Open Mosaic Habitat

Records within 250m	**1**

Sites verified as Open Mosaic Habitat. Mosaic habitats are brownfield sites that are identified under the UK Biodiversity Action Plan as a priority habitat due to the habitat variation within a single site, supporting an array of invertebrates.

Features are displayed on the Habitat designations map on **page 159**

ID	Location	Site reference	Identification confidence	Primary source	Secondary source	Tertiary source
26	236m SE	NLUD Ref: 43500011; BRITPITS ref: 74505	Low	National Land Use Database - Previously Developed Land	British Geological Survey BRITPITS database	UK Perspectives Aerial Photography

This data is sourced from Natural England.

13.4 Limestone Pavement Orders

Records within 250m	**0**

Limestone pavements are outcrops of limestone where the surface has been worn away by natural means over millennia. These rocks have the appearance of paving blocks, hence their name. Not only do they have geological interest, they also provide valuable habitats for wildlife. These habitats are threatened due to their

removal for use in gardens and water features. Many limestone pavements have been designated as SSSIs which affords them some protection. In addition, Section 34 of the Wildlife and Countryside Act 1981 gave them additional protection via the creation of Limestone Pavement Orders, which made it a criminal offence to remove any part of the outcrop. The associated Limestone Pavement Priority Habitat is part of the UK Biodiversity Action Plan priority habitat in England.

This data is sourced from Natural England.

This data is sourced from the British Geological Survey.

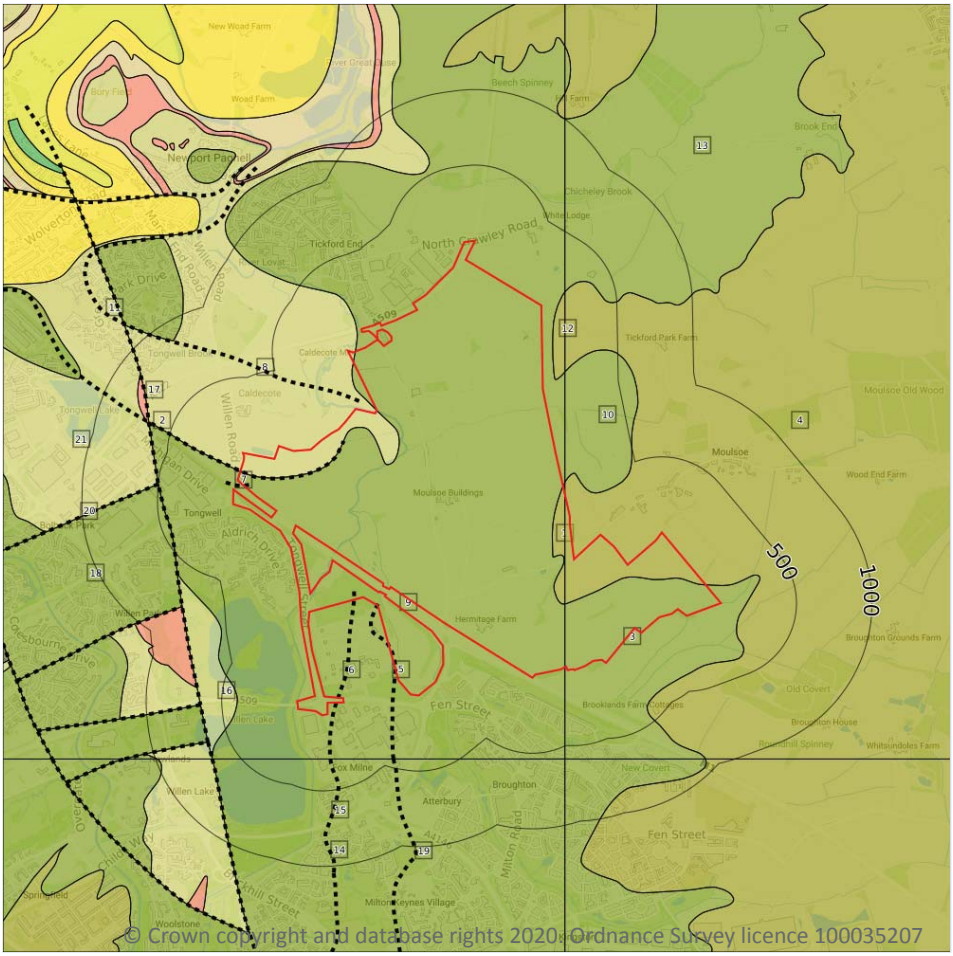
14.4 Landslip (10k)

Records within 500m	**0**

Mass movement deposits on BGS geological maps at 1:10,000 scale. Primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground.

This data is sourced from the British Geological Survey.

Geology 1:10,000 scale - Bedrock



Site Outline

Search buffers in metres (m)

Bedrock faults and other linear features (10k)

Bedrock geology (10k)
Please see table for more details.

14.5 Bedrock geology (10k)

Records within 500m	12

Bedrock geology at 1:10,000 scale. The main mass of rocks forming the Earth and present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

Features are displayed on the Geology 1:10,000 scale - Bedrock map on **page 169**

This data is sourced from the British Geological Survey.

14.6 Bedrock faults and other linear features (10k)

Records within 500m	**9**

Linear features at the ground or bedrock surface at 1:10,000 scale of six main types; rock, fault, fold axis, mineral vein, alteration area or landform. Features are either observed or inferred, and relate primarily to bedrock.

Features are displayed on the Geology 1:10,000 scale - Bedrock map on **page 169**

ID	Location	Category	Description
2	**On site**	**LANDFORM**	**Buried channel or valley margin**

19	443m S	LANDFORM	Buried channel or valley margin
20	498m W	FAULT	Normal fault, inferred; crossmarks on downthrow side

This data is sourced from the British Geological Survey.

15 Geology 1:50,000 scale - Availability

15.1 50k Availability

Records within 500m	1

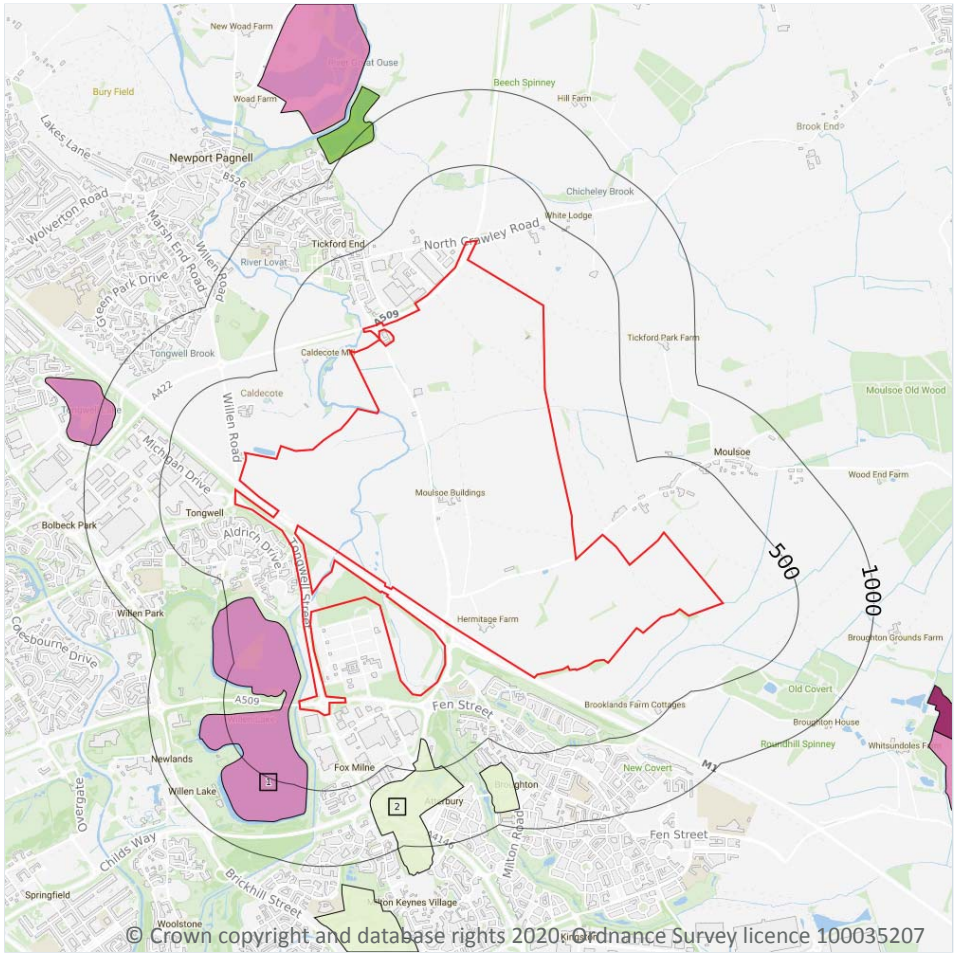
An indication on the coverage of 1:50,000 scale geology data for the site. Either 'Full' or 'No coverage' for each geological theme.

Features are displayed on the Geology 1:50,000 scale - Availability map on **page 171**

ID	Location	Artificial	Superficial	Bedrock	Mass movement	Sheet No.
1	**On site**	**Full**	**Full**	**Full**	**Full**	**EW203_bedford_v4**

This data is sourced from the British Geological Survey.

Geology 1:50,000 scale - Artificial and made ground



15.2 Artificial and made ground (50k)

Records within 500m	2

Details of made, worked, infilled, disturbed and landscaped ground at 1:50,000 scale. Artificial ground can be associated with potentially contaminated material, unpredictable engineering conditions and instability.

Features are displayed on the Geology 1:50,000 scale - Artificial and made ground map on **page 172**

ID	Location	LEX Code	Description	Rock description
1	44m W	WGR-VOID	WORKED GROUND (UNDIVIDED)	VOID
2	285m S	WMGR-ARTDP	INFILLED GROUND	ARTIFICIAL DEPOSIT

This data is sourced from the British Geological Survey.

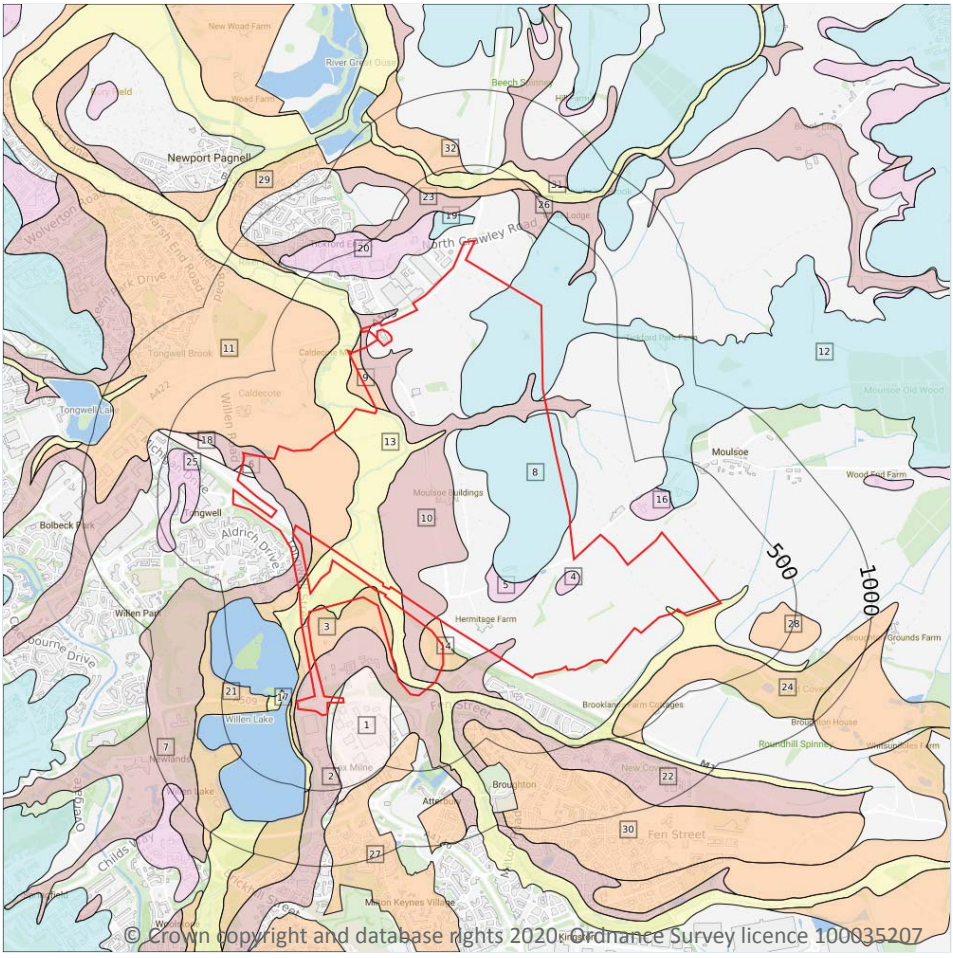
15.3 Artificial ground permeability (50k)

Records within 50m	0

A qualitative classification of estimated rates of vertical movement of water from the ground surface through the unsaturated zone of any artificial deposits (the zone between the land surface and the water table).

This data is sourced from the British Geological Survey.

Geology 1:50,000 scale - Superficial



Site Outline

Search buffers in metres (m)

Landslip (50k)

Superficial geology (50k)
Please see table for more details.

15.4 Superficial geology (50k)

Records within 500m **32**

Superficial geological deposits at 1:50,000 scale. Also known as 'drift', these are the youngest geological deposits, formed during the Quaternary. They rest on older deposits or rocks referred to as bedrock.

Features are displayed on the Geology 1:50,000 scale - Superficial map on **page 174**

16.1 BGS Boreholes

Records within 250m	417

The Single Onshore Boreholes Index (SOBI); an index of over one million records of boreholes, shafts and wells from all forms of drilling and site investigation work held by the British Geological Survey. Covering onshore and nearshore boreholes dating back to at least 1790 and ranging from one to several thousand metres deep.

Features are displayed on the Boreholes map on **page 181**

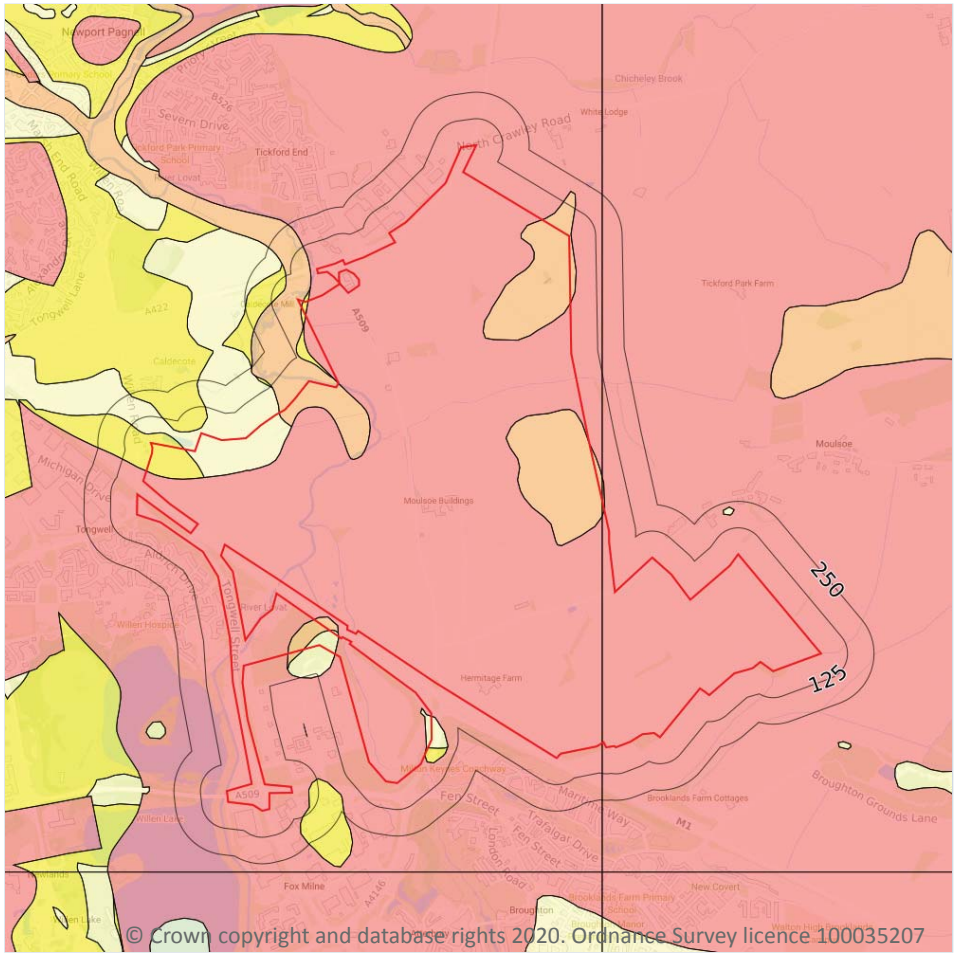
17 Natural ground subsidence - Shrink swell clays



17.1 Shrink swell clays

Records within 50m	5

The potential hazard presented by soils that absorb water when wet (making them swell), and lose water as they dry (making them shrink). This shrink-swell behaviour is controlled by the type and amount of clay in the soil, and by seasonal changes in the soil moisture content (related to rainfall and local drainage).

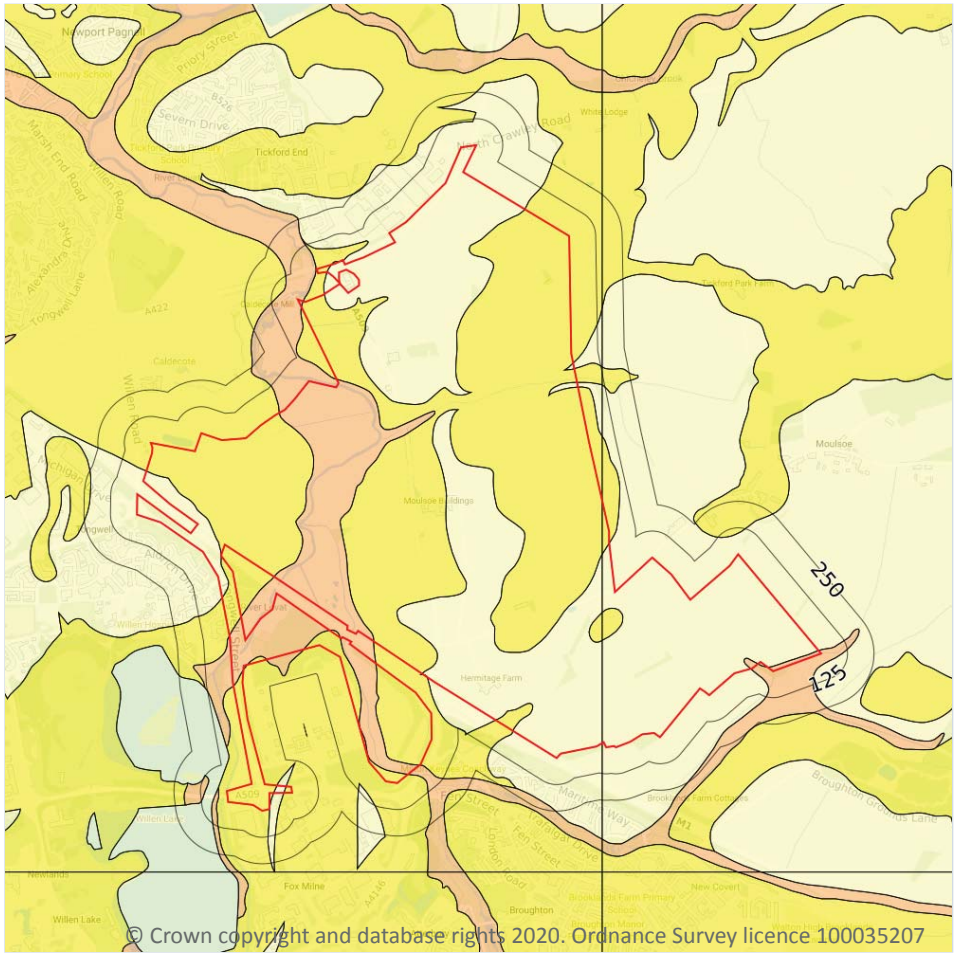
Features are displayed on the Natural ground subsidence - Shrink swell clays map on **page 199**

Location	Hazard rating	Details
On site	**Negligible**	**Ground conditions predominantly non-plastic.**
On site	**Very low**	**Ground conditions predominantly low plasticity.**
On site	**Low**	**Ground conditions predominantly medium plasticity.**

Location	Hazard rating	Details
On site	**Moderate**	**Ground conditions predominantly high plasticity.**
24m NW	Very low	Ground conditions predominantly low plasticity.

This data is sourced from the British Geological Survey.

Natural ground subsidence - Running sands



Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.2 Running sands

Records within 50m	**5**

The potential hazard presented by rocks that can contain loosely-packed sandy layers that can become fluidised by water flowing through them. Such sands can 'run', removing support from overlying buildings and causing potential damage.

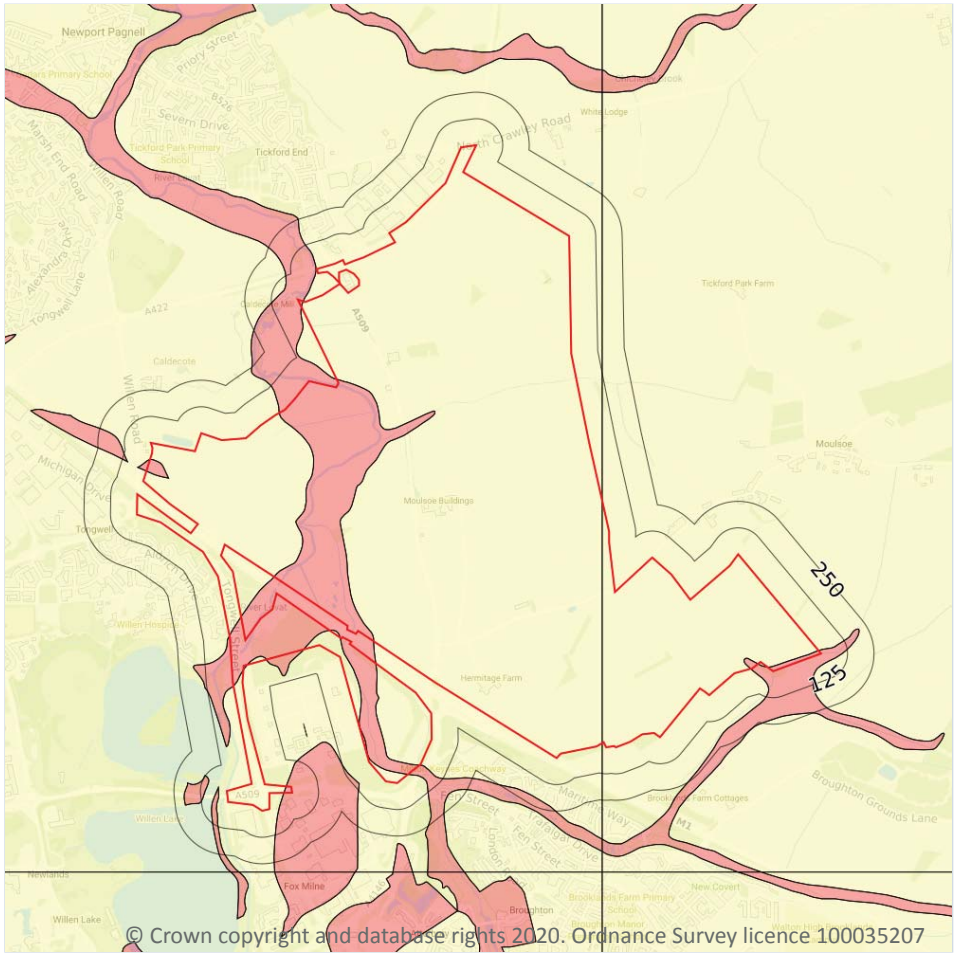
Features are displayed on the Natural ground subsidence - Running sands map on **page 201**

Location	Hazard rating	Details
On site	**Negligible**	**Running sand conditions are not thought to occur whatever the position of the water table. No identified constraints on lands use due to running conditions.**

Location	Hazard rating	Details
On site	**Very low**	**Running sand conditions are unlikely. No identified constraints on land use due to running conditions unless water table rises rapidly.**
On site	**Low**	**Running sand conditions may be present. Constraints may apply to land uses involving excavation or the addition or removal of water.**
40m W	Low	Running sand conditions may be present. Constraints may apply to land uses involving excavation or the addition or removal of water.
44m W	Negligible	Running sand conditions are not thought to occur whatever the position of the water table. No identified constraints on lands use due to running conditions.

This data is sourced from the British Geological Survey.

Natural ground subsidence - Compressible deposits



Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.3 Compressible deposits

Records within 50m	3

The potential hazard presented by types of ground that may contain layers of very soft materials like clay or peat and may compress if loaded by overlying structures, or if the groundwater level changes, potentially resulting in depression of the ground and disturbance of foundations.

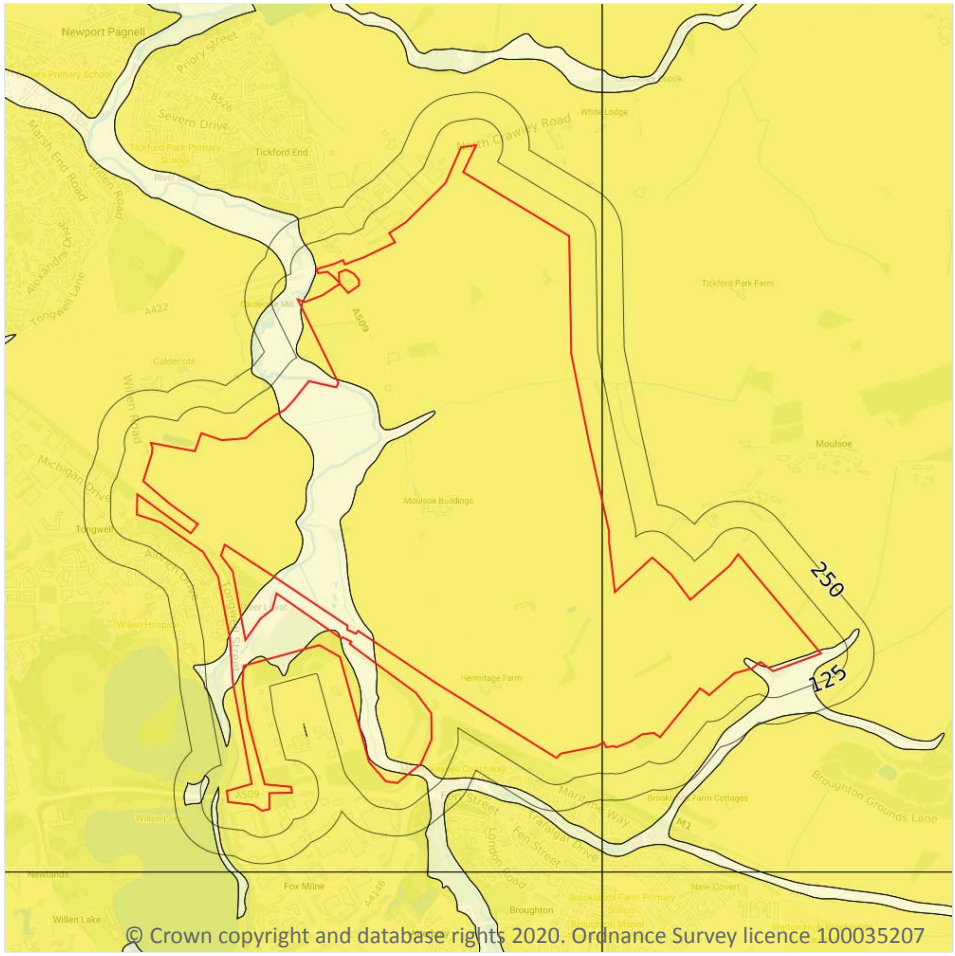
Features are displayed on the Natural ground subsidence - Compressible deposits map on **page 203**

Location	Hazard rating	Details
On site	**Negligible**	**Compressible strata are not thought to occur.**
On site	**Moderate**	**Compressibility and uneven settlement hazards are probably present. Land use should consider specifically the compressibility and variability of the site.**

Location	Hazard rating	Details
40m W	Moderate	Compressibility and uneven settlement hazards are probably present. Land use should consider specifically the compressibility and variability of the site.

This data is sourced from the British Geological Survey.

Natural ground subsidence - Collapsible deposits



Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.4 Collapsible deposits

Records within 50m	3

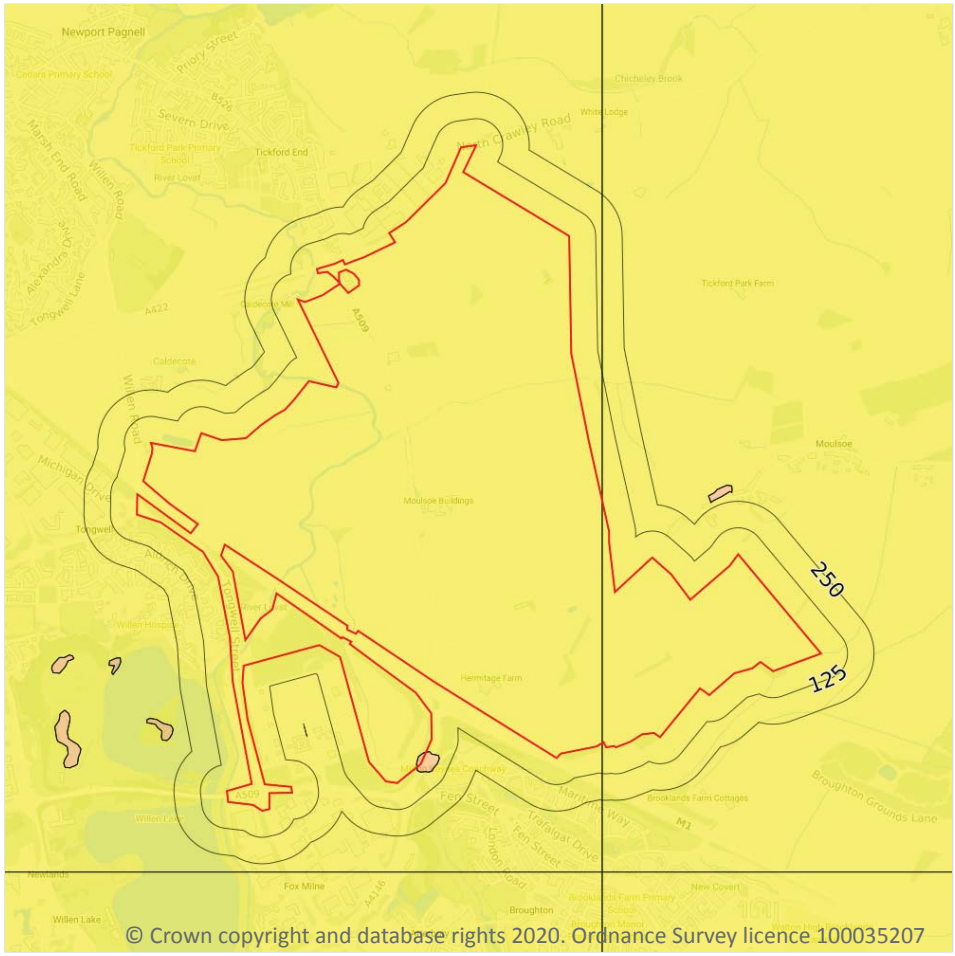
The potential hazard presented by natural deposits that could collapse when a load (such as a building) is placed on them or they become saturated with water.

Features are displayed on the Natural ground subsidence - Collapsible deposits map on **page 205**

Location	Hazard rating	Details
On site	**Negligible**	**Deposits with potential to collapse when loaded and saturated are believed not to be present.**
On site	**Very low**	**Deposits with potential to collapse when loaded and saturated are unlikely to be present.**
40m W	Negligible	Deposits with potential to collapse when loaded and saturated are believed not to be present.

This data is sourced from the British Geological Survey.

Natural ground subsidence - Landslides



Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.5 Landslides

Records within 50m	2

The potential for landsliding (slope instability) to be a hazard assessed using 1:50,000 scale digital maps of superficial and bedrock deposits, combined with information from the BGS National Landslide Database and scientific and engineering reports.

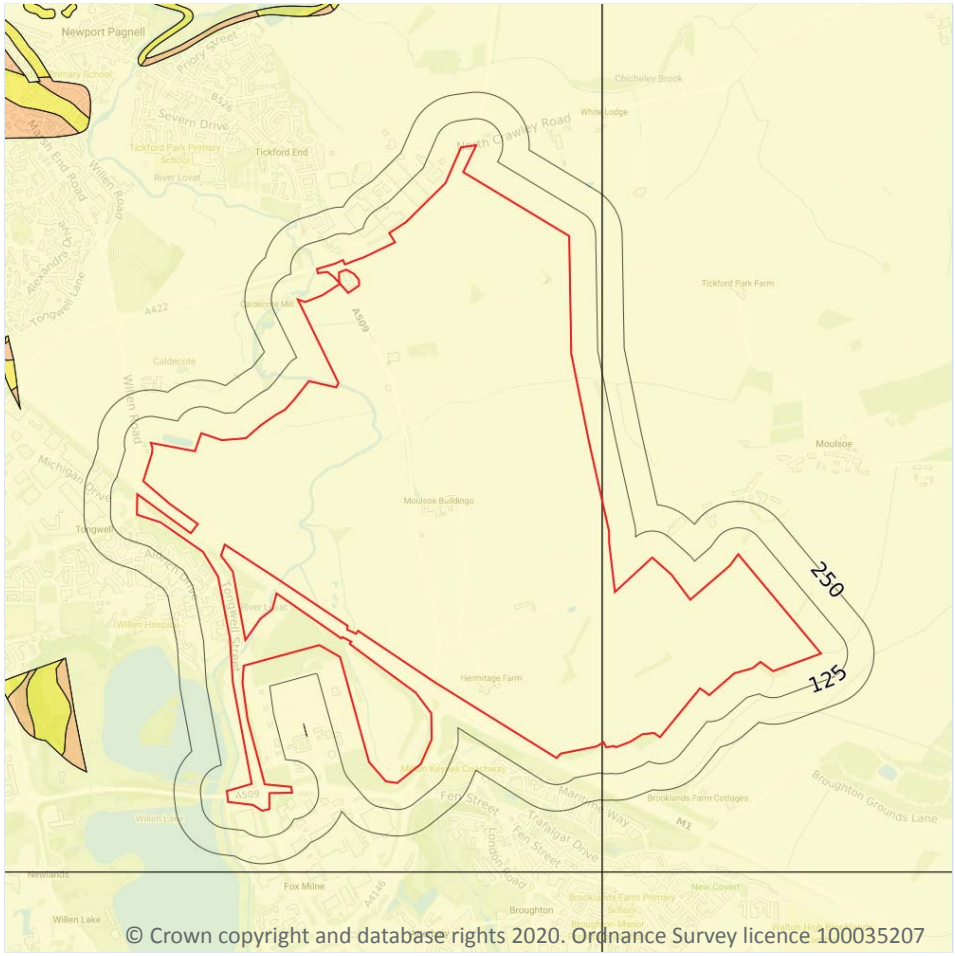
Features are displayed on the Natural ground subsidence - Landslides map on **page 207**

Location	Hazard rating	Details
On site	**Very low**	**Slope instability problems are not likely to occur but consideration to potential problems of adjacent areas impacting on the site should always be considered.**

Location	Hazard rating	Details
On site	**Low**	**Slope instability problems may be present or anticipated. Site investigation should consider specifically the slope stability of the site.**

This data is sourced from the British Geological Survey.

Natural ground subsidence - Ground dissolution of soluble rocks



Site Outline

Search buffers in metres (m)

- No data
- Negligible
- Very low
- Low
- Moderate
- High

17.6 Ground dissolution of soluble rocks

Records within 50m	1

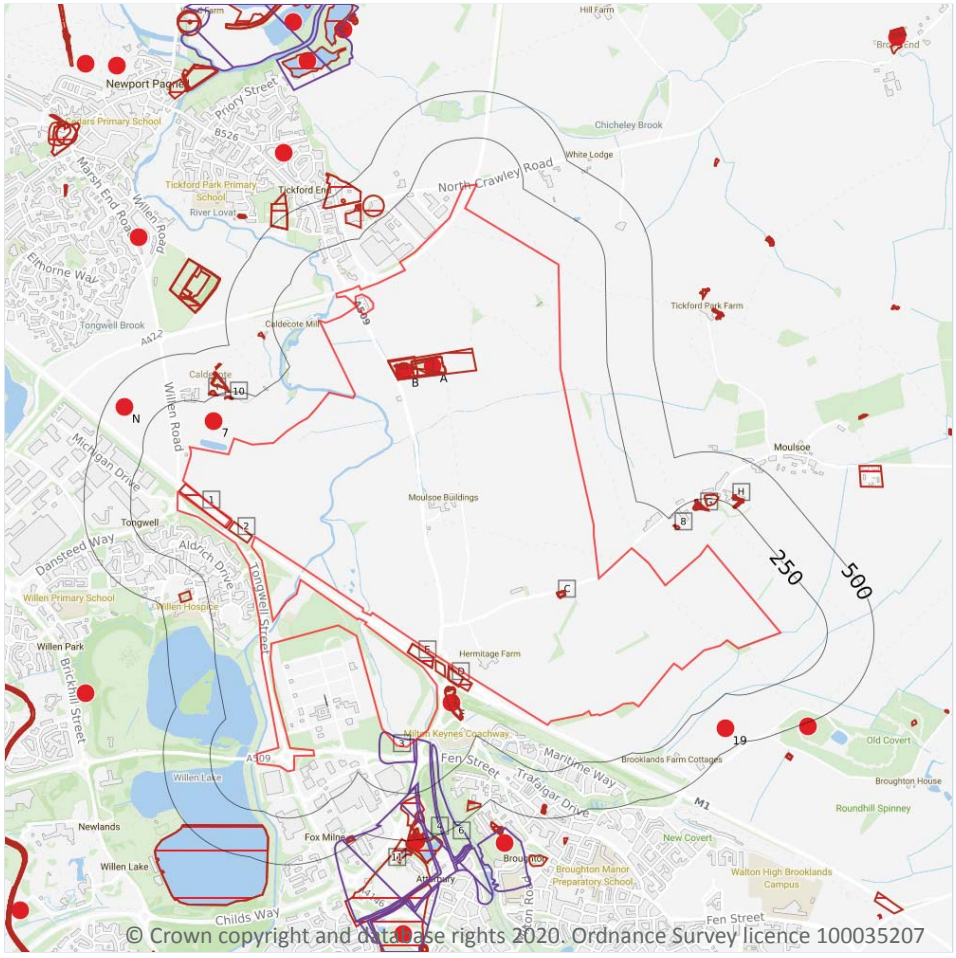
The potential hazard presented by ground dissolution, which occurs when water passing through soluble rocks produces underground cavities and cave systems. These cavities reduce support to the ground above and can cause localised collapse of the overlying rocks and deposits.

Features are displayed on the Natural ground subsidence - Ground dissolution of soluble rocks map on **page 209**

Location	Hazard rating	Details
On site	**Negligible**	**Soluble rocks are either not thought to be present within the ground, or not prone to dissolution. Dissolution features are unlikely to be present.**

This data is sourced from the British Geological Survey.

18 Mining, ground workings and natural cavities



18.1 Natural cavities

Records within 500m	0

Industry recognised national database of natural cavities. Sinkholes and caves are formed by the dissolution of soluble rock, such as chalk and limestone, gulls and fissures by cambering. Ground instability can result from movement of loose material contained within these cavities, often triggered by water.

This data is sourced from Peter Brett Associates (PBA).

18.2 BritPits

Records within 500m	7

BritPits (an abbreviation of British Pits) is a database maintained by the British Geological Survey of currently active and closed surface and underground mineral workings. Details of major mineral handling sites, such as wharfs and rail depots are also held in the database.

Features are displayed on the Mining, ground workings and natural cavities map on **page 211**

ID	Location	Details	Description
A	**On site**	**Name: London Road Brick Field Address: Newport Stables, NEWPORT PAGNELL, Buckinghamshire Commodity: Clay & Shale Status: A surface mineral working. It may be termed Quarry, Sand Pit, Clay Pit or Opencast Coal Site**	**Type: Ceased Status description: Site which, at date of entry, has ceased to extract minerals. May be considered as Closed by operator. May be considered to have Active, Dormant or Expired planning permissions by Mineral Planning Authority**
B	**On site**	**Name: London Road Brick Field Address: Newport Stables, NEWPORT PAGNELL, Buckinghamshire Commodity: Clay & Shale Status: A surface mineral working. This is data is sourced from Ordnance Survey/Groundsure.

18.4 Underground workings

Records within 1000m	**0**

Historical land uses identified from Ordnance Survey mapping that indicate the presence of underground workings e.g. mine shafts.

This is data is sourced from Ordnance Survey/Groundsure.

18.5 Historical Mineral Planning Areas

Records within 500m	**4**

Boundaries of mineral planning permissions for England and Wales. This data was collated between the 1940s (and retrospectively to the 1930s) and the mid 1980s. The data includes permitted, withdrawn and refused permissions.

Features are displayed on the Mining, ground workings and natural cavities map on **page 211**

ID	Location	Site Name	Mineral	Type	Planning Status	Planning Status Date
3	**On site**	**Broughton Flyover**	**Sand and gravel**	**Surface mineral working**	**Valid**	**14/9/64**
4	1m SE	Broughton Flyover	Sand and gravel	Surface mineral working	Refused	12/7/44

11	223m S	Broughton Flyover	Sand and gravel	Surface mineral working	Valid	12/7/44

This data is sourced from the British Geological Survey.

18.6 Non-coal mining

Records within 1000m	0

The potential for historical non-coal mining to have affected an area. The assessment is drawn from expert knowledge and literature in addition to the digital geological map of Britain. Mineral commodities may be divided into seven general categories - vein minerals, chalk, oil shale, building stone, bedded ores, evaporites and 'other' commodities (including ball clay, jet, black marble, graphite and chert).

This data is sourced from the British Geological Survey.

18.7 Mining cavities

Records within 1000m	0

Industry recognised national database of mining cavities. Degraded mines may result in hazardous subsidence (crown holes). Climatic conditions and water escape can also trigger subsidence over mine entrances and workings.

This data is sourced from Peter Brett Associates (PBA).

18.8 JPB mining areas

Records on site	0

Areas which could be affected by former coal mining. This data includes some mine plans unavailable to the Coal Authority.

This data is sourced from Johnson Poole and Bloomer.

18.9 Coal mining

Records on site	0

Areas which could be affected by past, current or future coal mining.

This data is sourced from the Coal Authority.

18.10 Brine areas

Records on site	0

The Cheshire Brine Compensation District indicates areas that may be affected by salt and brine extraction in Cheshire and where compensation would be available where damage from this mining has occurred. Damage from salt and brine mining can still occur outside this district, but no compensation will be available.

This data is sourced from the Cheshire Brine Subsidence Compensation Board.

18.11 Gypsum areas

Records on site	0

Generalised areas that may be affected by gypsum extraction.

This data is sourced from British Gypsum.

18.12 Tin mining

Records on site	0

Generalised areas that may be affected by historical tin mining.

This data is sourced from Mining Searches UK.

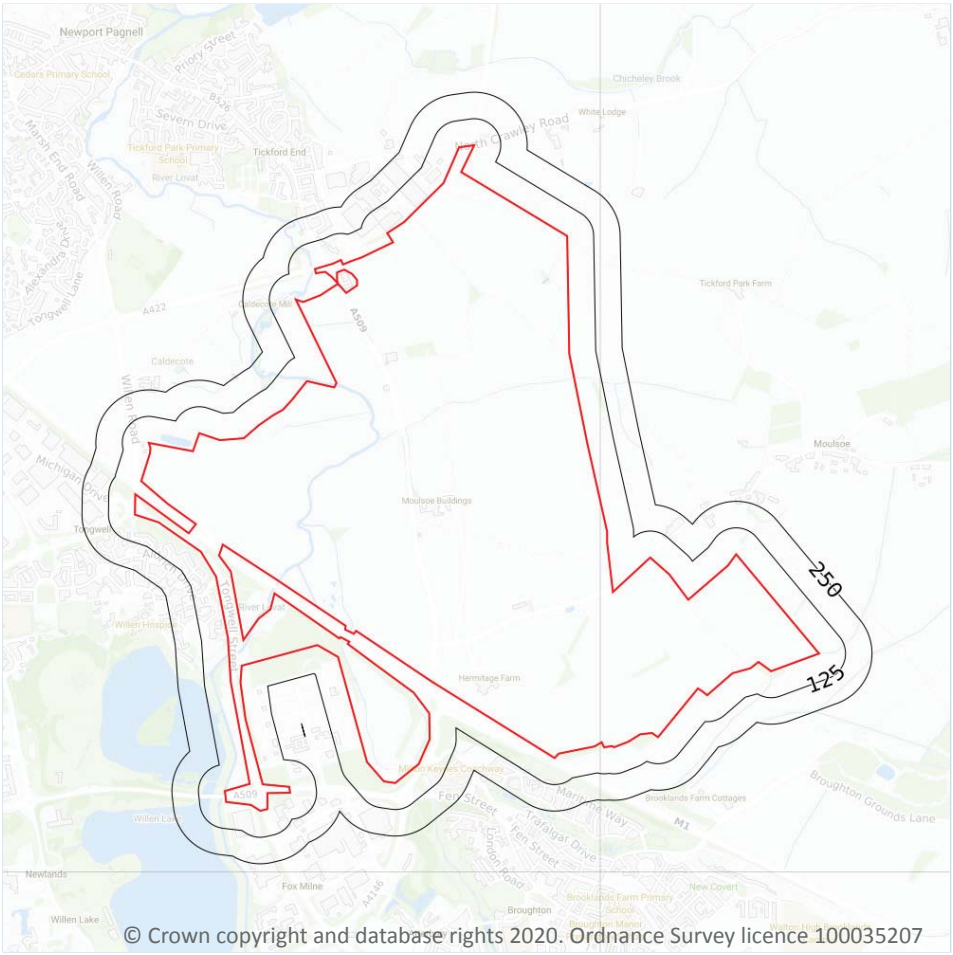
18.13 Clay mining

Records on site	0

Generalised areas that may be affected by kaolin and ball clay extraction.

This data is sourced from the Kaolin and Ball Clay Association (UK).

19 Radon



Site Outline

Search buffers in metres (m)

- Greater than 30%
- Between 10% and 30%
- Between 5% and 10%
- Between 3% and 5%
- Between 1% and 3%
- Less than 1%

19.1 Radon

Records on site	1

Estimated percentage of dwellings exceeding the Radon Action Level. This data is the highest resolution radon dataset available for the UK and is produced to a 75m level of accuracy to allow for geological data accuracy and a 'residential property' buffer. The findings of this section should supersede any estimations derived from the Indicative Atlas of Radon in Great Britain. The data was derived from both geological assessments and long term measurements of radon in more than 479,000 households.

Features are displayed on the Radon map on **page 218**

Location	Estimated properties affected	Radon Protection Measures required
On site	**Less than 1%**	**None****

This data is sourced from the British Geological Survey and Public Health England.

20 Soil chemistry

20.1 BGS Estimated Background Soil Chemistry

Records within 50m **167**

The estimated values provide the likely background concentration of the potentially harmful elements Arsenic, Cadmium, Chromium, Lead and Nickel in topsoil. The values are estimated primarily from rural topsoil data collected at a sample density of approximately 1 per 2 km^2. In areas where rural soil samples are not available, estimation is based on stream sediment data collected from small streams at a sampling density of 1 per 2.5 km^2; this is the case for most of Scotland, Wales and southern England. The stream sediment data are converted to soil-equivalent concentrations prior to the estimation.

This data is sourced from the British Geological Survey.

20.2 BGS Estimated Urban Soil Chemistry

Records within 50m	0

Estimated topsoil chemistry of Arsenic, Cadmium, Chromium, Copper, Nickel, Lead, Tin and Zinc and bioaccessible Arsenic and Lead in 23 urban centres across Great Britain. These estimates are derived from interpolation of the measured urban topsoil data referred to above and provide information across each city between the measured sample locations (4 per km^2).

This data is sourced from the British Geological Survey.

20.3 BGS Measured Urban Soil Chemistry

Records within 50m	0

The locations and measured total concentrations (mg/kg) of Arsenic, Cadmium, Chromium, Copper, Nickel, Lead, Tin and Zinc in urban topsoil samples from 23 urban centres across Great Britain. These are collected at a sample density of 4 per km^2.

This data is sourced from the British Geological Survey.

21 Railway infrastructure and projects

21.1 Underground railways (London)

Records within 250m	0

Details of all active London Underground lines, including approximate tunnel roof depth and operational hours.

This data is sourced from publicly available information by Groundsure.

21.2 Underground railways (Non-London)

Records within 250m	0

Details of the Merseyrail system, the Tyne and Wear Metro and the Glasgow Subway. Not all parts of all systems are located underground. The data contains location information only and does not include a depth assessment.

This data is sourced from publicly available information by Groundsure.

21.3 Railway tunnels

Records within 250m	0

Railway tunnels taken from contemporary Ordnance Survey mapping.

This data is sourced from the Ordnance Survey.

21.4 Historical railway and tunnel features

Records within 250m	0

Railways and tunnels digitised from historical Ordnance Survey mapping as scales of 1:1,250, 1:2,500, 1:10,000 and 1:10,560.

This data is sourced from Ordnance Survey/Groundsure.

21.5 Royal Mail tunnels

Records within 250m	0

The Post Office Railway, otherwise known as the Mail Rail, is an underground railway running through Central London from Paddington Head District Sorting Office to Whitechapel Eastern Head Sorting Office. The line is 10.5km long. The data includes details of the full extent of the tunnels, the depth of the tunnel, and the depth to track level.

This data is sourced from Groundsure/the Postal Museum.

21.6 Historical railways

Records within 250m	0

Former railway lines, including dismantled lines, abandoned lines, disused lines, historic railways and razed lines.

This data is sourced from OpenStreetMap.

21.7 Railways

Records within 250m	0

Currently existing railway lines, including standard railways, narrow gauge, funicular, trams and light railways.

This data is sourced from Ordnance Survey and OpenStreetMap.

21.8 Crossrail 1

Records within 500m	0

The Crossrail railway project links 41 stations over 100 kilometres from Reading and Heathrow in the west, through underground sections in central London, to Shenfield and Abbey Wood in the east.

This data is sourced from publicly available information by Groundsure.

21.9 Crossrail 2

Records within 500m	0

Crossrail 2 is a proposed railway linking the national rail networks in Surrey and Hertfordshire via an underground tunnel through London.

This data is sourced from publicly available information by Groundsure.

21.10 HS2

Records within 500m	0

HS2 is a proposed high speed rail network running from London to Manchester and Leeds via Birmingham. Main civils construction on Phase 1 (London to Birmingham) of the project began in 2019, and it is currently anticipated that this phase will be fully operational by 2026. Construction on Phase 2a (Birmingham to Crewe) is anticipated to commence in 2021, with the service fully operational by 2027. Construction on Phase 2b (Crewe to Manchester and Birmingham to Leeds) is scheduled to begin in 2023 and be operational by 2033.

This data is sourced from HS2 ltd.

Dear Ashley

Sorry for the delay in replying to your email, it was forwarded to an inbox that we don't regularly use but I will be monitoring it more closely in future.

I'm not sure where the site is exactly but normally we are able to provide the information requested, however, we do make a charge of £188.90 per hour (or part thereof) and I anticipate that it would take an hour to deal with your request. We are able to raise an invoice once the information has been provided. Please confirm that you wish to proceed with your enquiry on this basis. If you do wish to proceed please let me know if there is a purchase order number you would like me to include on the invoice.

I look forward to hearing from you.

Kind regards

Nicola

Subject: [EXT] Contaminated land enquiry for planning - MKE

Good morning,

We are currently undertaking environmental consultancy work on a site in Milton Keynes known as Milton Keynes East. I am hoping to make a data enquiry for the site for numerous contaminated land aspects. Who might be best for me to contact?

I would like to ask if any pertinent records are held on your database regarding the site including:
• Any environmental issues associated with the site, specifically related to contamination of soil or groundwater either beneath the site or within a 500m radius
• Water quality records / issues within 1km of the site
• Presence of above ground storage tanks/gas meters on adjacent sites and any spills or leaks associated with these
• Any records of landfill or waste transfer activities within 500m of the site
• Any soil or groundwater remedial works carried out at the site or within 500m of the site

Any queries on the above please do let me know.

Thank you for your help,

Ashley

Attachments: U002158 Cotton Valley Sewage Works Notice 2.doc; U002157 Cotton Valley Sewage Works Notice 1.doc; MKEast.jpg

Dear Ashley,

Further to your enquiry a search of our records reveals the following:

- No areas of the site, or within 500 metres of the site, have been determined as contaminated land as defined under Part 2A of the Environmental Protection Act 1990. We currently have no evidence to suggest that the site could be determined as contaminated land. No areas of the site have been identified for inspection as part of Milton Keynes Council's contaminated land inspection strategy. Within 500 metres of the site there are 3 Industrial Estates, site A, B and C on the attached map. We have no reason to believe that the sites are not suitable for their current use and have no evidence to suggest they could impact on the site in question.
  Site D on the attached map is the current Anglian Water, Water Recycling centre, Cottonvalley WRC. In June 2010 two statutory nuisance notices were issued under the Environmental Protection Act 2010 in respect of odours from the site. Significant investment was made by Anglian Water to comply with the notices and improve the sewage treatment, with the installation of a heat treatment, Cambi plant. The untreated sewage sludge is no longer kept in lagoons, unless in an emergency. We still receive a handful of complaints each year regarding odour, but none have constituted a significant pollution incident or breach of the notices. Environmental Health has regular liaison meetings with them and other community stakeholders. I have attached copies of the notice for your information.

- Unfortunately we do not hold water quality records, you may wish to refer to the Environment Agency in this regard.

- We are not aware of any leaks or spills from tanks at the site of adjacent to the site but we have the following records regarding tanks within the site boundary:

  Site E and F on the attached map are records of septic tank, I understand these properties are not on the mains sewage and the tanks are likely to be underground.
  Site G; an application was made on 1950 for petrol tank, but we have no record of a corresponding petroleum licence record. Therefore, it is likely that the tank wasn't installed or was not operational for long.
  Site H is a record of a tank from the historical map, but it was concluded that this was most likely for water.
  Site I on the attached map, Hermitage Farm, held petroleum licence record for a 500 gallon petroleum tank. This was converted to diesel in 1995. Unfortunately I cannot determine from my records if the tank is under or above ground or if it is still operational.
  We are no aware of any heating oil leaks associated with nay of the properties on the site.

- Site J on the attached map is a Community Recycling Centre, operated on behalf of Milton Keynes Council.

  We have no record of any licensed landfills within the site boundary or within 500 metres, however there are areas of fill that pre date the 1974 Control of pollution Act and subsequent waste management licences.

  Site K is a former 'borrow pit'. We have no further records of what the site was subsequently filled with.

Site L is recorded on the historical map as a Landfill, probably for inert wate associated with the construction of the motorway junction. Site investigations associated with the Coachway did not reveal anything other than inert fill.
Sites M and N are sand and gravel extraction sites, site M has been reinstated and site N is still active. Their reinstatement is subject to planning conditions.
Site O is recorded on the historical map (c1880-1925) as a mineral workings. We have no record of what the site was filled with.

- We have no record of any ground water contamination that has required remediation at the site or in the vicinity of the site. There are small sites that have had minor contamination that has required remediation in order to satisfy planning conditions following a change of use.
  Site P on the attached map required the removal of made ground and introduction of topsoil in garden areas, when the farm was developed to residential. We have no concerns regarding an impact on the site in question.
  Site Q, similarly to site P, required the removal of made ground due to PAH contamination and introduction of topsoil in garden areas, when the farm was developed to residential.

I hope the above information is useful, please do not hesitate to contact me if I can be of further assistance. An invoice in the sum of £188.90 will be forwarded to you shortly.

Some or all of the information in this report may have been gathered from third party sources. 10th March 2021 Ref: R631554

Scale 1: 23000

Gillan, Ashley

Subject: FW: Pre-desk study request

Good afternoon Roisin

Please find the PDSA below as requested. Any further queries, don't hesitate to contact us.

Pre-Desk Study Assessment	
Site:	Land southeast of Newport Pagnell, Milton Keynes, Buckinghamshire
Client:	WSP
Contact:	Roisin Lindsay
Date:	18th November 2020
Pre-WWI Military Activity on or Affecting the Site	None identified.
WWI Military Activity on or Affecting the Site	None identified.
WWI Strategic Targets (within 5km of Site)	The following strategic targets were located in the vicinity of the Site: ■ Transport infrastructure and public utilities.
WWI Bombing	None identified on the Site.
Interwar Military Activity on or Affecting the Site	None identified.
WWII Military Activity on or Affecting the Site	None identified.
WWII Strategic Targets (within 5km of Site)	The following strategic targets were located in the vicinity of the Site: ■ Transport infrastructure and public utilities. ■ Industries important to the war effort, including engineering works. ■ Royal Air Force (RAF) Cranfield. ■ Military depots. ■ Anti-Aircraft (AA) and anti-invasion defences.
WWII Bombing Decoys (within 5km of Site)	None.
WWII Bombing	During WWII the Site straddled the boundary between the Urban District (UD) of Newport Pagnell and the Rural District (RD) of Newport Pagnell. Newport Pagnell UD officially recorded 9No. High Explosive (HE) bombs with a bombing density of 2.6 bombs per 405 hectares (ha). Newport Pagnell RD officially recorded 163No. HE bombs with a bombing density of 2.6 bombs per 405 ha. No readily available records have been found to indicate that the Site was bombed.
Post-WWII Military Activity on or Affecting the Site	None identified.

Recommendation	A detailed desk study, whilst always prudent, is not considered essential in this instance.

This summary is based on a cursory review of readily available records. Caution is advised if you plan to action work based on this summary.

It should be noted that where a potentially significant source of UXO hazard has been identified on the Site, the requirement for a detailed desk study and risk assessment has been confirmed and no further research will be undertaken at this stage. It is possible that further in-depth research as part of a detailed UXO desk study and risk assessment may identify other potential sources of UXO hazard on the Site.

Many thanks

Joe
